THREE DAYS LATER FROM EUROPE

ARRIVAL OF THE AMERICA AT HALIFAX.

THE CABLE BROKEN!!

The Accident Caused by a Sudden Check.

Three Hundred and Thirty-five Miles Only Laid.

A PART OF THE FLEET SENT BACK.

The Niagara and Agamemnon still at Sea.

IMPORTANT FROM INDIA.

MORE MUTINIES.

DELHI NOT FALLEN.

Cotton Unchanged—Breadstuffs Advancing—Consols 91 1-8.

By the American Telegraph Company's lines this day.

HALIFAX, Wednesday, Aug. 26.

The Royal Mail steamship *America* arrived here at 1½ o'clock this morning. She left Liverpool at 8 o'clock on Saturday afternoon, the 15th inst. Her dates are consequently three days later than those already received.

The *America* makes the following report: Passed, Aug. 1, the ships *Carrier Dove* and *Scotland*, bound in. Aug. 16 passed, off Inishtrahull, British bark *Miller*, Sunday west. Aug. 22, lat. 49°, lon. 40° 20', at 5 P. M. exchanged signals with steamship *Persia*. Aug. 22, lat. 44°, lon. 46°, passed a large steamer steering east.

The steamship *North American* arrived out on the afternoon of the 18th inst.

The steamer *General Williams* had not sailed for Newfoundland, but was expected to leave on the evening of the 18th inst.

THE TELEGRAPHIC CABLE BROKEN!

Cause of Failure a Sudden Check in Paying Out.

RETURN OF THE STEAMERS—THE NIAGARA AND AGAMEMNON STILL AT SEA.

The Atlantic Telegraph is broken, and operations for the present are suspended. The British steamer *Quinpic* had returned to Valentia, with Mr. FIELD on board. That gentleman repaired immediately to London to confer with the Directors as to future movements. He telegraphed the information to Mr. BENJAMIN SWARTS, Agent of the Associated Press at Liverpool.

LIVERPOOL, Saturday Morning.

Her Majesty's steamer *Leopard* arrived at Portsmouth on Friday evening, the 14th inst., and reports that the Atlantic cable was lost at 8½ o'clock on Tuesday morning, the 11th inst., after having paid out approximately 335 nautical miles of the cable, and lost over 100 miles of it in water over two miles in depth, and the greater part of this at the rate of rather more than five knots an hour.

At the time the accident occurred there was a heavy swell on, and the ship was going at the rate of four knots an hour, and as the Engineer thought the cable was running too fast for the speed of the ship, he ordered it to be checked to allow the brake to be applied anew; [illegible] the cable parted at some distance from the stern of the ship.

The *Agamemnon*, *Niagara* and *Susquehanna* are at Queen's Island, where the cable parted, to try some experiments in the deep water of that part of the Atlantic, (two thousand fathoms,) which it is considered will be of great value to the Telegraph Company, and then all go to Plymouth, England.

The *Quinpic* was sent back with despatches to Valentia, and was then to join the *Leopard*, at Portsmouth.

Although the unfortunate accident will postpone the completion of this great undertaking for a short time, the result of the experiments has been to convince all those who took part in it, of the entire practicability of the enterprise; for with some slight alterations in the paying out machinery, there appears to be no great difficulty in laying down the cable; and it has been clearly proven that you can telegraph successfully through twenty-five hundred miles of cable, and know that its submersion at a great depth had no perceptible influence on the electric current. There is no obstacle to laying it down at the rate of five miles per hour in the greatest depth of water on the platform between Ireland and Newfoundland.

The experience now obtained must be of great value to the Company, and it is understood that the Directors will decide whether it is best to have more cable made and try again immediately after the Equinoctial gales are over, or wait until another Summer. In Liverpool an impression prevails that another trial will take place in October.

A Liverpool paper reports the arrival of the *Niagara*, *Susquehanna* and *Agamemnon* at Plymouth, on Friday, but doubtless it was a mistake.

Great Britain.

In the House of Commons, on Friday, the Chancellor of the Exchequer obtained leave to bring in a bill for continuing for two years, from April next, the present duties on tea and sugar.

On Thursday, in the House of Lords, the Marquis of CLANRICARDE asked the Government whether they would lay on the table certain papers to show the steps taken in pursuance of the promises of the great European Powers, recorded in the protocol of the Conference of Paris, relative to the Danubian Provinces, and calculated to explain the course adopted by the Government in these matters.

Lord CLARENDON, after entering into a history of the recent occurrences at Constantinople, stated that the papers asked for had been confidentially communicated to each of the Powers who were parties to the Treaty of Paris, and the Government did not consider that they would be justified in producing them.

The Commons were engaged in protracted debates on the Diversion Bill—its opponents fighting against it, step by step, and the Government equally determined in pressing it forward.

On Friday the affairs of India were debated in the House of Lords without any important development being made.

In the House of Commons the subject of railway extortion attracted attention, but the Government refused to mix itself up in these projects.

Mr. GLADSTONE compared Lord PALMERSTON for his political opposition to the Suez Canal, but the latter extended his objections to the scheme.

The suspension of Messrs. THOMAS ASHCROFT & SONS had been announced. Their liabilities, however, were not very large.

A report of the affairs of Messrs. CARR BROS. & CO., of Newcastle, who lately suspended, shows liabilities amounting to £700,000, and assets promising 10 shillings in the pound.

CHAS. EDWARD KEYTE KNIGHT has been appointed British Consul for Pennsylvania, and DENNIS DONOVAN Consul at Buffalo.

The American horse Fashion, ridden by a celebrated jockey, won the Sussex County Cup on the Goodwood course, on the 4th, beating a field of five.

[illegible]

the eve of dispatching to India, in all, seventy-two vessels, carrying about 27,000 troops.

The steamer *Sarah Sands* has been pronounced incapable of receiving troops and stores.

IMPORTANT FROM INDIA.

Delhi not Fallen—The Mutiny Spreading.

The overland mail arrived at Trieste on the 12th inst., and the telegraphic dispatch from there states that the Bombay dates are to July 14, and Calcutta to July 8.

Delhi had not fallen up to the 8th of June. The rebels had made several desperate sorties, but each time were repulsed with great slaughter. The city was reported full of sick and wounded, and cholera prevailed. Reinforcements continued reaching the British camp. Further mutinies in several districts had been reported. The Bombay and Madras armies remained loyal. Punjaub continued quiet. At Sirsa Gen. VAN COORTLANDT had attacked and completely defeated the insurgents, inflicting heavy loss. Gen. WOODBURN's column had completely crushed rebellion at Aurungabad. Intelligence had been received of the mutiny of the troops at Moorabad, Tyrabad, Sectopore, Sangor, Nogwang, Futtyghur, Jabour and Indore. Pishawar is disturbed, and three regiments had been disarmed there.

Sir COLIN CAMPBELL arrived at Aden on the 30th of July.

The first batch of the China Corps had arrived at Calcutta.

The British force before Delhi is stated to be from 7,000 to 8,000 Europeans, and 5,000 natives. The native portion of the force has proved trustworthy.

The rebels had been dispersed at Allahabad, and the post saved.

The barracks at Cawnpore were closely besieged by the insurgents, but held out bravely. Reinforcements were marching to their relief.

The whole of Oude had risen, but Sir HENRY LAWRENCE, with his small force, kept the enemy in check.

There are floating rumors, as there were on the receipt of the last mail, of the capture of Delhi, but they are wholly unreliable.

The Bengal *Harkaru* says: "We have received letters to say that the Government had got a telegraph message from Nangpore that Delhi had fallen on the 21st of June, describing the battle, and saying that upwards of 7,000 rebels were killed.

Calcutta was more tranquil, and the native bankers were gaining confidence. The papers say that we have seen the worst of the troubles, for there are no more regiments to mutiny, except those of Bombay and Madras, the fidelity of which there is no reason to suspect.

The Bombay Money market was very unsettled. Money was difficult to be had on any terms. The Import market was very quiet. Freights had advanced a little. The Calcutta markets were dull. The Bank of Bengal had raised its rate of interest and exchange to 2s. ¾d. The Madras Import market continued buoyant. The demand for Export was unabated.

LATER.

The India mails reached London on the 14th inst., but the correspondence adds nothing of importance to the telegraphic accounts.

The correspondent of the *Times* gives the details of the new outbreaks, which appear to have been less serious in their consequences than the early ones. He thinks the flood of the insurrection has been passed.

China.

Hong Kong dates are to June 24, but the Chinese news is unimportant. Trade continued unimportant at the northern ports.

[illegible] at Hong Kong [illegible], and at Shanghai, June [illegible], 8162.

[illegible] Emperor of China [illegible] affected, but it was not [illegible].

[illegible] were small. Freights and tonnage were abundant to London at £4 for Sugar and £5 for Hemp.

France.

An interview between the Emperors of France and Russia is again stated as certain to take place.

The Bank of France returns for the month show an increase of 1,700,000 francs, and in Paris a falling off in the branch Banks of 17,900,000 francs.

A bronze medal is to be given to the soldiers who served in the great wars of the Empire from 1792 to 1815.

The Louvre was inaugurated on the 14th. The Emperor was present, and in his speech congratulated the nation upon the possession of that political order which had permitted the realization of a project which had occupied the contemplation of every dynasty of France.

In Paris on Friday the Three Per Cents closed at 67f. 20c.

The Emperor's pardon, on the occasion of the *fête* of the 15th of August, will be extended to over 900 persons, condemned for various offences.

Spain.

A Madrid dispatch of the 11th inst., says that M. LAFRAGUA, the Mexican Envoy, had made known to the Mexican Consul that the Spanish Government has suspended all negotiations with him, and that consequently he has placed the Mexican subjects in Spain under the protection of France.

Portugal.

Spain has addressed a note to the Portuguese Government, asking for the extradition of Spanish refugees known to be in the Portuguese territory. It is believed that Portugal will not consent.

The tobacco contract was set up at auction at Lisbon, and let for three years at three hundred thousand per annum.

Italy.

A plot for the escape of all the galley slaves at Genoa had been discovered. All the turnkeys were to have been simultaneously murdered.

Turkey.

The latest dispatches from Constantinople give us no further news than that the ambassadors were still awaiting instructions from their respective governments. The Paris correspondent of the *Times* says the difficulty has been so far settled at Osborne that a conference will be unnecessary.

Dispatches from Vienna say that the Austrian Government was disposed to an arrangement of the Moldavian question, and it is stated in Vienna letters that the Austrian Minister went beyond his instructions.

Russia.

It has been credibly related in Vienna that a further reduction of the Russian army will shortly take place.

☞ *For Foreign Commercial News see Eighth Page.*

ARREST OF A DRY GOODS CLERK ON A CHARGE OF EMBEZZLEMENT.—On Tuesday evening a well-dressed and good-looking young man called at the Land office of Mr. JACKSON in Fulton-street, and offered to dispose of a quantity of silk on terms so remarkably "reasonable" that Mr. JACKSON's suspicions were aroused. The visitor had only about $40 worth of the article with him,—as a specimen,—but he said that if a bargain were made he would bring the balance in the morning. Mr. JACKSON detained the man in conversation until an officer whom he had slyly sent for could arrive. Officer MORGAN of the Second Precinct obeyed the summons and took the silk and man in custody. The prisoner on the way to the Station-house begged hard to be released and offered to pay the officer "right down" $10) and a gold watch and chain if he would permit him to escape. A deaf ear was paid to the fellow's entreaties and offers of bribery. On being taken to the Station-house he gave his name as WM. HENRY, M., was detained for the night, and meantime steps were taken to learn the man's abode, and further facts [illegible]

He was at first supposed to have some connection with the recent heavy burglary in Newburg, but yesterday his real name was ascertained to be MATHEW [illegible], and that he was, or until quite recently had been, a salesman in the dry goods house of D. THOMAS & Co., in Spring-street. His boarding-house in Greene street was searched, and stowed away in one of his trunks were found silks, shawls, &c., amounting in value to about $500.

Wright was taken to the Tombs yesterday afternoon and committed.

MORE COUNTERFEITS.

A New and Dangerous One on the Globe Bank, of Providence, R. I.—Its Circulation Prevented—Arrests, &c.

At a late hour yesterday afternoon Deputy Superintendent CARPENTER obtained information that a new counterfeit had been prepared, and that it was to be very extensively palmed off upon the unsuspecting public last evening. After much trouble Deputy CARPENTER succeeded in obtaining possession of a copy of the new bill, which he only did by investing a genuine $1. It purported to be on the Globe Bank, of Providence, R. I., and was admirably engraved, although the paper on which it was printed was rather poor. The following representation of the bill will show that it was admirably calculated to deceive:

Five. Five. Five. Five. Five. Five. Five. Five. Five. Five. Five.

Vignette. Vessels sailing. | RHODE ISLAND. The President, Directors and Co. of | Vignette, several females | 5

C No. 1412.

THE GLOBE BANK.

Promise to pay FIVE DOLLARS to *H. Hand* or Bearer on demand. | Vignette. A woman with shield containing | 5

PROVIDENCE, *May 7, 1854.*

5 *John B. Noyes, Cash.* *Wm. Sprague, Pres't.*

Five. Five. Five. Five. Five. Five. Five. Five. Five. Five. Five.

Upon obtaining the bill, Deputy C. immediately telegraphed to the Station-houses of the respective Précincts, ordering their commanding officers immediately to report to him. While this was going on he had a careful description of the dangerous bill made, and copies prepared. As soon as the various inspectors arrived, he directed each one to take two or three discreet men, on whom they could rely, and then to visit the drug stores, fancy stores, confectionaries, &c., in their respective Precincts, where it was likely that attempts would be made to pass the bills, and obtain genuine money in change, and to warn the proprietors of these stores, and show them the description of the bill. Each storekeeper was requested to detain any person offering the money, and to send immediately to the nearest Station-house.

At the same time Deputy C. sent out his detectives partly to "pipe" the places whence he suspected the bad money came from, and partly to assist in warning the storekeepers.

Having thus completed the preparations, Mr. CARPENTER resolved to remain all night in his office, No. 36 Franklin-street, in order to witness the result. Of course he was all excitement—at least, as much so as it is possible for a veteran police officer to be—and, when eight o'clock and nine o'clock passed, and no arrests were reported to him, Deputy C. began to feel uncomfortable. He began to think that either he had been sold, and that there was no intention of putting the bill in circulation here, or that some officer had "blown" on him to the dealer in the "queer," and had thus prevented its utterance. But just as he was despairing, a man rushed in and breathlessly stated that a bill of the kind in question had been offered at THOMPSON's saloon, and that the person who offered it was then waiting for his change.

Ere this information was entirely given, Officers MCCOMB and ELTZE, of the Deputy Superintendent's Office, had already started, and very soon had the individual in question arrested and safely before Mr. CARPENTER. He was a tall, slim man, well dressed, and gave his name as EDWARD PRESTON. He had first offered an Globe bill at Mr. THOMPSON's, in payment for some refreshments he had ordered. Young Mr. T., who was at the counter, asked him if he had nothing less than a ten. Preston replied, "Yes, I can give you change for a ten," and handed over the counterfeit five. Mr. THOMPSON, who had been warned, immediately sent out a waiter with directions to get change, which was a signal for him to go for an officer.

PRESTON, who is known as a "cross man," i. e., a thief, (he looks the image of one,) was searched by the officers, but no other counterfeit money was found upon him. He had two handkerchiefs about him, one of which was a perfectly new one which he had probably bought earlier in the evening with some of the "queer." Under the lappets of his vest and under the collar, small pockets were found, which most persons would overlook in making a search. From the absence of all other counterfeit money it is supposed that he "worked" with a confederate, one remaining outside with the funds while the other would go into a store and offer one of the bills. If arrested and searched, of course nothing else suspicious would be found upon him.

PRESTON was taken to the Fifth Precinct Station-house, to be detained till morning, when he will be taken before a Police magistrate, and probably be committed for trial.

Singular Suicide by a Young Woman.

The body of a young woman, named Mrs. ELLEN TILLMAN, was found yesterday floating near the foot of Wall street, in the East River. Apparently the corpse had been in the water two or three days. An inquest was held upon it by Coroner HILLS, and a verdict of "Supposed drowning" rendered. The body, however, was not identified until after the inquest.

Mrs. TILLMAN was lately employed in the laundry of Savery's Hotel, in Beekman street, where she became acquainted with JOSEPH TILLMAN, the baker of the hotel, whom she married only last Saturday week, and immediately thereafter removed to her husband's apartments in Madison-street, near the New Bowery. She seemed pleased with her change of life, and appeared in good spirits to such of her old companions as visited her.

Early last Sunday morning she arose, and dressing herself left the house. There was nothing unusual in her manner. Her husband supposed she had gone to "early Mass," but as she did not return late in the afternoon, he became anxious and went in search of her. The houses of her friends in Brooklyn and elsewhere were visited, but no tidings of her could be found. On Monday and Tuesday the Station-houses and Coroner's Office were visited, but all to no avail.

But yesterday, as already stated, the body was found in the river.

It is now said by some of her late neighbors, that Mrs. TILLMAN appeared at times greatly depressed, and just before her departure from home on Sunday, she was found sitting in the entry-way, sighing heavily. To the question, "What ails you?" she answered, "O my heart is broke."

It was stated at the Coroner's inquest that a sailor belonging to a ship, then absent, saw a woman last Sunday morning jump off the dock foot of Wall-street; that he threw towards her a rope, whereupon she shook her head, refused to take hold of the proffered aid and immediately sank beneath the surface, but whether deceased was the person or not could not be learned.

Mr. TILLMAN asserts that he and his wife lived most happily together, and that she never uttered any complaints or repinings; and he is at a loss to learn the cause of her mysterious disappearance and death. This was his second wife. He buried his first (by whom he had two children, yet living) about a year since. He is a German by birth, and bears an excellent reputation.

Mrs. TILLMAN was about 30 years of age, and was highly esteemed. She was a native of Ireland. Her maiden name was ELLEN CREADON.

Racing Steamboats.

NEW-YORK, Wednesday, Aug. 26, 1857.

To the *Editor of the New-York Daily Times:*

I came down, last night, from Albany, in the *New World*. About 12 o'clock, when nearly all the passengers were asleep, there was a RACE between our boat and the *Commodore*, from Troy. They kept side by side for nearly an hour, sometimes so near that I could jump aboard the *Commodore*. At one time they touched, and a crash followed, not very loud, it is true, but loud enough to frighten severe ladies, who left their rooms, and would not retire to bed again. Eight or ten passengers, who were up with myself, protested against this racing, and I believe it had the desired effect, for the *Commodore* passed us the next trial, with perfect ease. I make this statement to let the public who patronize these boats know that their lives, when aboard, are not so secure as they imagine. A NEW-YORKER.

MRS. CUNNINGHAM.

Her Appeal from the Surrogate's Decision—Her Finances, Hopes, Prospects and Condition—She may Become an Author.

Mrs. CUNNINGHAM reiterates to our Reporter, who called upon her yesterday, her determination to appeal from the recent decision of the Surrogate. She has employed or retained rather, Judge DUER, as her counsel in the case, and is preparing a petition of appeal to submit in regular order to the Supreme Court. This petition the statute allows her thirty days to present, and she feels in no hurry about the matter except to get it presented in time. As the case will have to be argued before three Judges at a General Term, it is not probable that it can come up for a hearing before next November. Meantime she intends to wait with the utmost patience, hoping justice will be meted to her in the form of a reversal of the decision of the Surrogate. Should the issue be adverse, however, she will push the appeal further, and if necessary, to the Court of last resort. She has strong hope of finally carrying her point—it matters not to her if the heirs of Dr. BURDELL exhaust the balance of his estate in warring against her—what she wants is not, money but to be acknowledged by the world as justly entitled to bear the name of her "*dear husband*, HARVEY BURDELL."

As for the decision of the Surrogate, Mrs. CUNNINGHAM says she did not read it entirely through. She glanced over it and saw the points of the argument, and that was all. The argument she thinks a very flimsy one, and says if she chose she could riddle it so completely that it could not by any possibility hang together. She asserts that she can bring forward witnesses to prove that Dr. BURDELL spoke to a certain clergyman in this City, (not Dr. MARVIN,) whose name shall be made known at the proper time, announcing to him his intended marriage to her, and asking him to perform the marriage ceremony.

Relative to Dr. CAYLIN, Mrs. CUNNINGHAM explains that her acquaintance with him began by having occasion, while she resided in Brooklyn, to call him to attend a member of her family during the absence from the city of her family physician. Dr. CAYLIN had called at her house occasionally since, but only as a visitor. She denied that anything had ever occurred between them that placed him in her power or gave him an advantage over her. She never said she had him under her thumb. She defied the whole world, indeed, to say aught against the purity of her life, or cast an imputation upon her womanly honor.

Mrs. CUNNINGHAM, after making the last remark which she did with a strong emphasis and forcible gesticulation of the right hand, paused for a full minute, her face buried in her hands and her bosom heaving apparently with tumultuous emotion. Regaining her self-possession and brushing away the tears which had filled her eyes, she proceeded to speak of her present imprisonment. The close confinement, she says, is wearing upon her constitution. Symptoms of dropsy begin to show themselves in her limbs, and she is troubled more or less with pains in the head. She attempted yesterday morning to walk out on the corridor fronting her cell, but could not support herself, and came near fainting away. She intends to keep her spirits up and fight as bravely as she can the battle before her.

Our Reporter informed Mrs. C. that at the entrance to the Tombs, as he came in, a very respectably dressed woman was standing and inquiring of the gate-keeper when her trial would take place, informing the gate-keeper that she wished to know on account of several of her lady neighbors, who were coming to the City by and bye, and wished to make their visit during the trial, so that they might see her! Mrs. C. did not know who she was nor suspect it, as curiosity was the strongest element in a female nature. To one gentleman who the last year related stories that a biography of herself, and particularly an autobiography, would command abundant sale, Mrs. CUNNINGHAM replied that a truthful autobiography she believed would be a valuable legacy for her to leave to the world. She felt fully competent to write it, but it would be a story of strange incidents. She said the idea had not suggested itself to her, but—as a relief to her present endurance of prison life if nothing more—she was not certain but she might be inclined to attempt such work.

One or the other of the daughters still remain with her at night.

EXPENSES OF THE BURDELL HEIRS VS. MRS. CUNNINGHAM'S LITIGATION.

Mrs. CUNNINGHAM says herself that it has cost her for lawyers' and other expenses thus far $7,000. Although she has expended this amount it has not left her without something to lean upon to support her through the remainder of the battle she expects to fight. She adds that she has paid up—ten dollars only excepted—every dollar due to her lawyers.

The expense entailed by the Burdell heirs is stated by parties claiming to be possessed of accurate information upon the subject, to be not less than $10,000, and that by the time the litigation ends not a moiety of Dr. BURDELL's estate will remain for division among the heirs.

MRS. CUNNINGHAM DISPOSES OF MORE PROPERTY.

The creditors of Mrs. CUNNINGHAM, who appear to be her only true and genuine sympathisers since the Surrogate's decision, will be happy to learn that she is now in a flush condition, notwithstanding the loss of her share of the Burdell property. We published yesterday a copy of a deed of property in Bergen, N. J., which she made over to her counsel, Mr. STAFFORD, and from which she realized the sum of $2,500. It seems that about the same time this transaction occurred Mrs. C. also made another transfer of property in this City, to Mr. GEORGE A. WILT, for the sum of $5,000. From an examination of the deed, which was recorded in the Register's Office on Tuesday last, we find that the property consisted of a house and lot "on the northerly side of Forty-sixth-street, distant two hundred and fifty feet westerly from Sixth-avenue." The grantee, GEO. A. WILT, it will be recollected, is the man who officiated in various useful capacities on the occasion of the sham accouchement which came off at No. 31 Bond-street on the night of the 3d of August. If the sum realized from these transfers has not already been expended in lawyers' fees, and other necessary items connected with her recent movements, it is hoped that the patient confectioner who did up the *cuisine* and gimcracks for Mrs. CUNNINGHAM's grand party last Winter, and possibly the dressmaker of whom she borrowed $500, and to whom she owed $300 more for work, may come in with their forlorn hopes.

Meanwhile, let some of the judgment creditors attack this conveyance, and inquire of Mr. WILT as to the *transaction*, and perhaps some new facts may be developed.

FATAL RAILROAD ACCIDENT.—A heart-rending accident occurred yesterday afternoon at Peekskill. A gentleman named THOMAS SEWELL, a retired merchant of Baltimore, in attempting to get into the cars at Peekskill, while the cars were moving, fell upon the track, and, before the train could be stopped, three cars had passed over his body. Dr. SNOWDEN, of Peekskill, was called in, but life was extinct. Mr. SEWELL was about 66 years of age. He was travelling for his health, having recently had an attack of the palsy. The daughter and sister-in-law were in the cars at the time, and upon learning who the unfortunate man was their distress can be imagined. Mr. SEWELL was seen to leave the cars, go to the rear of the depôt, and upon returning, the cars being in motion, he made a false step, and fell between them.

AN ARTFUL DODGE.—THE REPORTERS OFF THE TRACK.—We learn, from very good authority, that many of the rowdies wounded in the great Sixth Ward riot, on the last Fourth of July, were conveyed stealthily to St. Vincent's Hospital, corner of Eleventh-street and Seventh-avenue, where they were placed under the care of Dr. MICHAEL A. FINNELL, the Resident Surgeon. None of these parties were very seriously injured, and all recovered in due time and were discharged—inquisitive outsiders never suspecting the cause of their indisposition. The stories extemporized by these fellows, when asked by the Surgeon the occasion of their injuries, were absurd enough to excite laughter. Thus the most indefatigable reporter was deceived as to the number of the wounded in the riot, because no one dreamed of visiting St. Vincent's Hospital to make the report accurate.

THE ATLANTIC TELEGRAPH.

OFFICIAL HISTORY OF THE GREAT ENTERPRISE.

Interesting and Important Report of Preliminary Electrical Experiments.

ORGANIZATION OF THE COMPANY

General Manifesto of the Directors to the People of Both Continents.

The establishment of an Electric Telegraph between the Old and the New Continents, is obviously an enterprise which has no precedent in the annals of mechanical engineering; the object proposed being nothing less than the commercial annihilation of distance in respect to one of the great Gulfs which have been placed between the East and the West—the opposite halves of the habitable world.

Most people are aware that this surprising telegraphic connection is in process of being realized. The eyes of the entire civilized community are, indeed, directed with ever-increasing interest and expectation at the present time to the proceedings of the Company which has undertaken the labor; and two of the greatest Governments of the earth have been induced to accord their cordial and substantial support. Under this manifestation of sympathy and approval, execution in the mighty task has followed so closely upon plan, that in all probability the origin and completion of the work will be comprised within the compass of a single year. Nevertheless, every detail in the design has had to be deliberated upon and matured before a single step in execution could be set; an advantage which has only been secured by stretching the mental energies, and tasking the bodily strength of all who have been concerned in the work, to the utmost. The Directors of the Company feel that for various reasons it is due to the sympathizing public at large, as well as to the cooperating shareholders and the executive officers, now to place before the world a full statement of their past proceedings, and of the ground upon which they confidently look forward to a speedy consummation of their task.

EARLIEST STEPS OF THE ENTERPRISE—FIRST COMPANY INCORPORATED.

The earliest real step towards the undertaking, which is now auspiciously so far advanced, was taken three years ago. In the month of April, 1854, the Colonial Government of Newfoundland passed an act incorporating a Company for the Establishment of Telegraphic Communication between the Old World and the New. Shortly afterwards, the same Legislature expressed its interest in the enterprise in a very substantial way, by grants of land and subsidy, and by conferring the exclusive right to lead a telegraphic line upon the coast under its jurisdiction, extending the entire length of Newfoundland and Labrador. The Company having become the recipient of these privileges, next obtained a charter of similar tendency from the Government of Prince Edward's Island, and from the State of Maine, and also secured authority for certain subsidiary operations in Canada, besides getting a ratification and confirmation of its rights from her Majesty's Ministers at home.

The Incorporated Company, henceforth known under the denomination of "The New-York, Newfoundland, and London Telegraph Company," having appointed Prof. MORSE their electrician, commenced to connect St. Johns, Newfoundland, with the lines already in operation in the British North American provinces, and in the United States, by constructing 15 miles of cable across the Straits of Northumberland, and 70 miles in the vicinity of St. Lawrence. England and the Continent had already been connected with Ireland, irrespective of any design to extend the telegraphic communication towards the West. There therefore remained only a single gap to be filled in—the basin of the Atlantic itself.

The Newfoundland Company having completed these preliminary steps, with a singular exertion of judgment and good sense, placed itself in communication with the most experienced authorities in electrical and mechanical affairs on this side of the ocean, and made strenuous efforts to combine all the skill and intelligence it could command in advancing towards the solution of the problem upon its hands. In the investigations which were now entered upon Mr. WILLIAM WHITEHOUSE, at present the electrician of the Company, and Mr. CHARLES BURNY, its engineer, and the engineer of the Magnetic Telegraph Company, took a prominent part. As early as 1854 these two gentlemen were occupied upon a series of experiments, to determine the influence of induction and disguised electricity in retarding the transmission of currents along submarine wires, and since then they have been conjointly and separately prosecuting the important investigation. Before alluding to these experiments, or their results, it will be necessary to offer a few words of familiar explanation regarding the principle which is involved.

FAMILIAR EXPLANATION OF THE SCIENTIFIC PRINCIPLES INVOLVED.

In the ordinary arrangement of the wires of the electric telegraph, where these are stretched between posts, and insulated simply by glass or earthenware holders and the investing air, the current of electricity runs along as a simple stream, and with a velocity that is almost inappreciable for any distance numbered by a few hundreds of miles. When, however, the wires are inclosed in a compact sheath of insulating substance, such as gutta percha, and are placed in a moist medium, or in a metallic envelope, the case is materially changed. The influence of induction then comes into play as a retarding power to a very sensible extent. So soon as the insulated central wire is electrically excited, that electrical excitement operates upon the near-at-hand layer of moisture or of metal, and calls up in it an electrical force of an opposite kind. These two different kinds of electricity then pull at each other, to use a homely phrase, through the intervening layer of impenetrable insulator, and each "disputes" an equivalent portion of the other—that is, holds it fast locked in its own attraction, and so renders it, for the time, valueless as an agent of extraneous power. The inner electricity keeps the outer induced force stationary upon the external surface of the insulating sheath. The outer induced electricity keeps a certain portion of the inner, excited influence, on the interior surface of the insulating sheath as a charge, and so prevents it from moving freely onward on its journey as it otherwise would. It is precisely the same thing as the effect which is produced when the ordinary Leyden jar of the experimentalist is charged by a frictional machine. The excitement produced in the inner surface of

[illegible] upon these practical investigations, he had at this time discovered that they were in need of some more precise method of measuring the time occupied by the transmission of electrical influence, than they yet possessed. Mr. WHEATSTONE accordingly was led to trace out the plan of an instrument which has since become in its main supply perfect as a scrutinizing agent, and which only admits of some trifling alterations, but actually planned in the manner in which it is now employed. Instead of the tremulous and cumbersome agents and agencies, and employed in every possible way, with a view to eliminate the element of uncertainty and error, by making use of only the best means of a great number of observations.

The basis of this scrutinizing instrument is a ribbon of chemically-prepared paper, (like the one already described,) unrolled from a drum by clockwork—revolving instruments which make local batteries print on the ribbon by short circuits when magnetically disturbed to do so—and a seconds pendulum vibrating in such a manner that it sends an electric current opposite ways along the wire under examination at each vibration, a result which is brought about from a half vibration, a result which is brought about by the following arrangement: The pendulum itself is hung upon a pivot, which is one of the poles of an electrical battery, but is prolonged upwards into a sort of crook, that touches a spring right and left as it swings to and fro. The springs, when at rest, press upon a pillar lying between them, which is the other pole of the battery. The crook of the pendulum lifts the one of these springs which it touches, off the pillar for the time. When it lifts the right spring, it sends a current from the positive pole out through it and the wire, and back through the right spring to the negative pole or pillar. The wire is coiled in different places round bars of soft iron. When the current passes through these coils, the bars become magnets for the time, but the precise nature of their magnetism depends on the direction in which the current runs. When the direction is from the right spring of the pendulum apparatus, the North pole of the magnet is where the South pole of the bar is found when the direction is from the left spring, and that is each of these temporary magnets, thus formed, is placed a true and permanent magnet, hung on a pivot, so that it can traverse right or left. The reversal of the magnetism in the temporary magnet causes the true magnet to move on its pivot so far as it can, because North poles attract South poles, and the reverse. A pole of the temporary magnet being now North, puts to itself a South pole of the true magnet, which is, however, sent smartly away so soon as the pole of the temporary magnet becomes a South pole itself. When these traversing magnets lie in one direction, they complete the circuit of a number of small local batteries, and cause them to impress on the sheet of prepared paper. When they lie the opposite way, they open or break the circuit, and stop the printing. The pendulum thus reversing the direction of the current of the long wire at each second, makes the local battery print one second, and stop one second, and then print again. On the unrolling ribbon of paper there are long dark traces, alternated with clear spaces, each being *one second long*; that is representing in linear measure that interval of time. But there are two or more receiving instruments (according to circumstances) set to work by the same current, sent on by the vibration of the pendulum. If, for example, a wire or cable 1,100 miles long be under examination, and one *receiving instrument be placed* in relation with the commencement of the wire, and another with its end, then the styles of those instruments moved side by side on the paper ribbon will print just when the current influences the electro magnet belonging to them. If the current does not arrive at the magnet until some appreciable time after the other, the one style will not begin to print until so long after the other style. The one trace on the paper will lay back to a certain extent behind the other. But the distance the paper moves in a second is known and each alternate second by the slanted trace printed by the style. Consequently, the distance which one trace lags back behind the other, or in other words, the length of time the electrical current has taken to run through the wire from one receiving instrument to the other, can be estimated with the utmost precision in fractional parts of the length *of the printed representation of a second*. It does not at all matter what the speed is with which the paper ribbon is moved beneath the styles; because the estimate of the amount of retardation is always a relative one, capable of being fixed for each instant by the length of the particular track made by the foot of the pendulum. This relation is at once fixed by taking two simple measures by compasses, upon an accurately engraved scale. When the velocity of transmission in any particular arrangement is to be determined, the apparatus *is set to work*, and prints a lengthened series of observations; these are afterwards carefully examined, and all that seem to be doubtful, being rejected, the more satisfactory ones are added together, and their mean recorded.

EXPERIMENTS UPON LONG LINES.

Having thus 1,146 miles of telegraphic cable under their hands and this delicate piece of scrutinizing apparatus to work with in making investigations, the first fact to be determined by the experimenters was, *could any available signal be transmitted through the 1,146 miles of conductor*. A seconds pendulum was first arranged to turn on the electrical current to the wire at each beat without attempting the reversal of the current. A trace appeared in a very short time under a style connected with the further end of the cable; there could be no doubt of the ability of the electrical influence to make itself telegraphically manifest through that vast extent at least.

There was, however, this curious anomaly in the result of the experiment. The pendulum made connection with the voltaic battery only for an instant at each beat; but the printed trace on the paper was not interrupted. *It was one long continuous line.* The reason for this was, that the conducting wire did not discharge itself between beat and beat. The current moved so sluggishly and unwillingly in this protracted and induction encumbered channel, that one transmission was not able to clear itself off, before the next was pressing upon its heels, and in confusion with it.

This was at once felt to be a very important affair, and one that might probably affect materially the fortunes of lengthened submarine telegraphs. In order that telegraphy under such circumstances may be of practical service, it is necessary not only that the telegraphing influence shall be able to traverse to the end of the wire; but it also is essential that it shall be so *mutable in its movements as to afford the opportunity for a fair number of signals to be passed in any given time.* Otherwise, the telegraph could never be worked remuneratively at charges that would make it of general use. If every distinct signal required a second for the Atlantic line, the probability is, that the undertaking would not prove to be a commercial success, although the cable might be affordable for exceptional cases and great emergencies.

THE ACTUAL SPEED OF THE CURRENT.

Impressed with this consideration, the experimenters proceeded to *test the actual speed* with which signals might be made to succeed each other in an insulated wire 1,146 miles long. First, a simple voltaic current was used, and caused to split itself into two equal halves by inserting a column of water in the circuit, which afforded precisely the same resistance to its movement as the 1,146 miles of wire. The current then spontaneously divided itself between the wire and the water. A column of water three eighths of an inch in diameter and thirty inches long, proved to be as strong an obstacle to the passage of the current as 1,146 miles of gutta percha-covered copper wire of No. 16 gauge. Next, a series of electro-magnetic induction coils were employed—that is, secondary currents of considerable intensity were set moving inductively by electro magnets, themselves inductively formed by currents circling round them in coils from powerful voltaic combinations. One of the magnets was caused to send its secondary currents directly to a printing instrument. The other magnets were made to transmit their currents to another instrument of like kind through the 1,146 miles of wire. Through the intervention of these arrangements it was determined that even the comparatively feeble and momentary magneto-electrical current took a second and a half to discharge itself, when it moved through 1,146 miles of wire, in consequence of the retarding power of induction in this lengthened medium.

The next step was to test the power of art to finish a remedy for this inductive obstacle. Such arrangements were made with magneto-electric coils, as enabled the operator to send rapid alternations *of different kinds* of electricity along the wire, under the anticipation that each transmission would then serve to clear away the residue of the antagonistic current which had immediately preceded it. A hint, indeed, was taken from what had already been done with long subterranean circuits. HENLEY's instrument, in previous use on the magnetic lines of telegraph, transmits alternately reversed currents along the wires, these being generated by the motion of electro-magnetic coils, suspended on an axis before the poles of a permanent magnet. The desired end was attained in the present case, by reversing the course of a voltaic current in an induction coil at each renewed signal. Although the same wire and the same magneto-electric combination were employed which had before demanded a second and a half for the completion of a single discharge, *seven and eight currents now readily recorded themselves distinctly in a second!* The residue of the old current which clung pertinaciously about the wire was rapidly and completely discharged by a stream of electricity of the opposite kind. When positive followed negative, and negative followed positive, in exactly equal proportions, the result was that the electrical equilibrium of the wire was continually restored as fast as it was disturbed, and so its telegraphic capabilities steadily maintained. It was now obvious that no instrument could be expected to be successful in the working of a long submarine line which did not satisfy this condition of the alternate use of opposite currents of the influence, but that by the adoption of such an instrument there was great and, indeed, fundamental obstacle to the commercial success of extended subterranean lines might be hoped to be damaged.

Professor FARADAY had, some time before the institution of these experiments, shown that successive charges of electrical influence may be traveling along the wire at the same time, the one following the other, as the successive undulations of the tide follow each other, along the channel of the River into the Amazon. It was now ascertained, therefore, that the alternate opposite currents could do this same thing. Alternate positive and negative signals were sent along 900 miles of wire, at the rate of eight signals in each second, and the signals arrived at the end of the wire after the rate of twenty-seven had been disentangled. By the use of a wire 1,050 miles long, in another experiment, three signals of a single-stroke bell were distinctly heard after the movement of the hand which originated the currents had ceased.

NEW INSTRUMENTS FOR RESCUING THE MERCY OF MAN.

CRITICAL CONSIDERATIONS.

The conductor of these experiments had now fully learned the great need there was for some more precise and trustworthy measure for the force of moving currents of electricity than science had yet furnished. The old galvanometer, which consists of a magnetized needle suspended freely in a position where electrical currents may be made to course round it in a coil, proved to be of no value whatever when currents of high degrees of force and limited duration came under examination. The needle then commonly turns somersets, and jerks backwards and forwards in the most hysterical and passionate way, instead of maintaining the steady divergence which alone could be accepted by the eye of science as a satisfactory indication of strength. Mr. WHEATSTONE accordingly resolved that he would make the surest and most stable of all powers, terrestrial gravity, to take upon itself the work magnetic polarity was too impulsive to perform. He determined that he would adapt the force of his electrical currents in an actually literal sense. He, accordingly prepared a delicate and sensitive steelyard, as the most convenient form of balance for the purpose he had in view, and he hung moveable weights, which could be shifted backwards and forwards at will, upon the long arm of the steelyard, arming the short end with a small bar of soft iron. At a short distance beneath this bar was placed another bar of soft iron surrounded by a coil of fine wire, so that it could be converted into an electro-magnet merely by the transmission *of an electric current along the coil. The force* of the current, in any given case, then determined the strength of the magnet, and the strength of the magnet was necessarily indicated by the number of grains which its attraction for the short arm of the *steelyard could lift*, by tilting them up on the opposite long end of the lever. It is only necessary to see this staid and business-like instrument at work by the side of the old ecstatic, as well as static needle, to comprehend its superiority at a glance. The one piece of apparatus tossing so wildly and crazily about, that for minutes at a time the most patient and skillful observer can make neither head nor tail of its bewildering movements; the other piece quietly tilting up its weight on the steelyard, and refusing in the most self-possessed way to lift another grain under any inducement that can be brought to bear, and then sending in its refusal as the exact estimate of the force it has been commissioned to determine. This beautiful little instrument was named by its inventor, the Magneto-electrometer.

RATIO OF DISTANCE TO FORCE.

With these instrumental aids at command, the time now seemed to have arrived for entering fully into the question of the ratio in which increase of distance in a gutta percha covered telegraph wire augments the difficulties of rapid transmission. Many electricians had, previously to this time, believed that the available force of a current is diminished in the ratio of the square of the distance it has traversed; that is, that a current which has traversed 600 miles has only a thirty-sixth part of the working force of a precisely similar current which has traveled only 100 miles. In this part of the inquiry it became *essential* that the force should be estimated under two perfectly distinct phases, because each is an element in the stress of the current to accomplish *serviceable labor. First the diminution of the current's power to produce mechanical effects*, in consequence of the length of journey which had been made, was to be examined, and then the *loss of speed* which it experienced from the same cause. If in both these particulars the diminution was in proportion to the law of the squares of the distance, then there could be no doubt that Electric Telegraphy through a long submarine wire, such as the breadth of the Atlantic would require, would become difficult to accomplish in a somewhat similar degree.

A voltaic battery, consisting of 72 pairs of plates, having each a surface 16 square inches, was set to work, and it was then ascertained how many grains the current from this battery would raise in the magneto-electrometer, upon being transmitted through a wire just long enough to effect the connection. The number of grains lifted was 25,000. The experiment being repeated with the same current transmitted to the Magneto-electrometer through 100 miles of insulated wire, the number of grains lifted was 16,650. With four hundred miles of wire it was 8250, and with 600 miles of wire, it was 1400. If the lifting force had diminished in the ratio of the square of the distance through which it had been sent, it would have lifted much less than 1400 grains. It was therefore clear that, in this particular, nature intended to be more auspicious to the cause of Ocean Telegraphy than theory. But this was much more strikingly illustrated when loss of velocity was taken, as the estimate, instead of loss of lifting force. Upon various occasions nearly 5,000 observations were made with different lengths of wires, varying from 83 to 1,020 miles, with a view to the establishment of the varying rates with which the electrical influence traveled through them. From these observations it appeared that with a length of wire of 83 miles, the transmission was effected in .06 of a second. With 166 miles, in .14 of a second. With 249 miles, in .36 of a second. With 498 miles, in .79 of a second, and with 1,020 miles, in 1.43 of a second. Taking 83 miles as the unit, there was in these observations a series of distances employed, which would be represented by the numbers 1, 2, 3, 6, and 12. Consequently, if the law of the squares of distance had applied, the transmission through the thousand-mile length of wire should have been one hundred and forty-four times as slow as through the 83 miles length, or in other words, it should have required nearly twelve seconds for its completion. The result of a very large number of direct experiments and observations, pretty well established the fact, that the velocity of movement of a magneto-electric current, through a gutta percha covered copper wire of the size of 16 gauge, in 300 miles in from one-twelfth to one-sixteenth of a second; 600 miles in from one-sixth to one ninth of a second; and 900 miles in from one fifth to one-fourth of a second. The series of distances being represented by 1, 2, 3—the corresponding series representing velocity becomes one quarter, one-ninth, one-sixteenth, or thereabouts. With a wire 500 miles long, 250 distinct signals were attainable in a period which allowed of exactly 270 distinct signals, when a wire 1,020 miles long was used.

But the extent of the conductor is obviously not the only element concerned in the velocity of transmission, for wires of equal dimensions and of like composition. The velocity varies with the strength or quantity of the electrical current sent through any given wire. Seven small pieces of zinc were prepared and covered entirely with sealing wax, fragments of copper wire being attached to serve as copper plates. The sealing wax was then chipped off just from the point of each, leaving a portion of the metal bare, to the extent of scarcely the size of the letter o on this page. These zinc plates having been put into seven small acid-charged cells, and so constituted a voltaic battery, a receiving instrument was set printing by means of their Lilliputian energies through 600 miles of wire. The printing instrument performed its work with the utmost facility, but, by means of the recording apparatus already described, it was proved that the current took nine-tenths of a second to make its journey. From a voltaic sand battery of twelve pairs of four-inch plates, the current took forty-four hundredths of a second to traverse 600 miles of wire.

Yet again; currents of a different quality traveled with different degrees of velocity, even when equal to mechanical tasks of like amount at the extremity of any given wire. Seventy-two pairs of sand battery plates, (each sixteen square inches in area,) which lifted 1,400 grains in the magneto-electrometer at the end of a 600 miles wire, generated a current which took forty-four hundredths of a second to traverse that distance. Two large double induction coils, 36 inches long, (the secondary coils being composed of a mile and a third of fine wire,) and excited by ten pairs of plates of 100 square inches each, arranged as a Smee's battery, gave rise to a current which could only lift 745 grains at the end of a 600 miles wire, but the current in this case traveled through the entire stretch of wire in nineteen-hundredths of a second. Simple voltaic electricity was capable of a greater mechanical effort at the end of a long wire, than a magneto-electric current; but the voltaic electricity, which was capable of the greater mechanical effort, strange to say, *traveled through the insulated wire at a considerably lower rate of speed.* A very large number of experiments combined to prove that a rate of transmission could be obtained by the employment of magneto-electric currents from two and a half to three times as great as that of any voltaic impulse that could be used. The mean or average speed for voltaic electricity in a No. 16 guage copper wire, of a certain determinate length, was about 1 400 miles per second; the mean or average speed of the magneto-electric current in a similar wire of equal length was about 4,500 miles per second. The maximum speed attained by voltaic electricity was 1,800 miles per second; the maximum for the magneto-electric current was 6,000 miles per second. There could be no doubt, after these experiments, that *the magneto electric current issuing from induction coils gives a treble velocity of electrical transmission, and therefore realizes a three fold working speed.*

Professor FARADAY has shown that no augmentation of velocity results from the use of an increased amount of battery power in the simple voltaic arrangement, up to the employment of twenty times the number of plates used at the first. In this particular again the double induction current established for itself a marked superiority. This current can have its speed augmented by increased amount of battery power. This was remarkably proved by an inverse inference in one observation, in which there was a steady and gradual diminution of velocity from 5,400 to 2,800 miles per second, during the spontaneous exhaustion of a small Grove's battery, employed in exciting a series of magnetic induction coils. Increased *quantity* in this arrangement tells by filling the thick wire of the primary coil to its full capacity, and this produces increased polar force in the temporary magnet, and increased inductive excitement in the finer secondary coil. The scientific world is particularly indebted to Professor W. THOMPSON, of Glasgow, for the attention he has given to the theoretical investigation of the conditions under which electrical currents move in long insulated wires, and Mr. WHEATSTONE has had the advantage of this gentleman's presence at his experiments, and counsel, upon several occasions, as well as the gratification resulting from his countenance and coöperation as one of the Directors of the Company.

Experiment demonstrates that the velocity of an electric current diminishes with progress along a lengthened gutta percha coated wire, more nearly in the proportion of an arithmetical series, than in that of the squares of the units of distance traveled. The retardation practically *does* in a measure exceed the simple arithmetical ratio of units of distance traversed; but this departure from the law of the simple series is in all probability due to the retardation caused in the further portions of the conducting wire by the increasingly exhausted condition of the weakened stream. When the amount of electro motive force is fairly proportioned to the length of the wire, a more uniform rate of propagation in the several parts of a continuous extent is found than is the case when an adequate amount of electrical influence is employed.

When the notion was first brought prominently forward that the electrical influence ought to pass along telegraphic wires with a velocity proportional in reverse ratio to the square of the length of the wire, an hypothetical plan was proposed for practically getting over this difficulty. This plan was, to make the road for the electrical current of better cross, by *rendering it larger*. It was conceived that if one wire was required to transmit signals with equal facility and speed to another which was only one-sixth part as long, the longer wire should be made of at least six times the capacity of the shorter one.

It was obviously a matter of primary importance to the cause of Atlantic telegraphy that the deductions of this theory should be put to rigid experimental proof, because, if they were correct, as large and ponderous a cable would be required to carry even a single conductor, that the manufacture and deposit in the Atlantic depths of such an unwieldy mass would be an affair that must prove of exceeding difficulty and cost, if not, indeed, altogether impracticable. The Calais and Dover cable weighs eight tons per mile; the entire weight of a cable for Atlantic service, of only the same dimensions as this, would be at least 30,000 tons. As, therefore, the Atlantic *Cable would be required by theory considerably to exceed this*, it is plain that not even SCOTT RUSSELL's leviathan ship, *which will be able to move over the* waves with an army of ten thousand men upon her decks, could carry it to its destination. In the unsuccessful *attempt to lay down the Mediterranean Cable*, it was found to be a task of extreme difficulty, and *even danger, to manage the mechanical parts of the* operation, owing to the great weight of the cable held in suspension, and the vast strength and grip of machinery required to suspend. It may, therefore, be easily imagined what the task would be with a cable *weighing some ten tons per mile*. The weight in Atlantic depths, dependent upon itself, and hanging from the ship and machinery would with it exceed 90 tons; an amount equally inconvenient and dangerous to the cohesion of the structure, and to the capabilities of the apparatus used in paying out.

The first experimental investigations upon this point comprised a series of not less than two thousand observations. The experiments worked with a 300 miles length of wires, which could be doubled so to double and treble at will, that it became for the time virtually a wire of twice or three times the original capacity. The result was that it appeared the wire of increased capacity *did not transmit electrical signals with greater facility* and speed than the smaller one. With a length of 166 miles, the velocity of movement of the simple voltaic current came out .16 of a second for a single wire; .21 of a second for a double one, and .26 for a treble one. With the same length, the velocity of the double induction current came out for the single wire, .09 with the double one, .09; and with the treble one .095 of a second. With a length of 250 miles, the velocity was for voltaic electricity, .29 and .406 of a second for a single and double wire respectively, and for the double induction current .145 and .185 of a second. The fact thus actually is, that *increasing the size of the conductor augments retardation* in the transmission of electricity through it. A treble sized conductor gives nearly a doubled rate of retardation.

GENERAL RESULTS.

The general conclusion drawn from the important investigation of the assumption that electrical currents would move in submarine circuits with velocities that were in inverse ratio to the squares of the lengths of the circuits, seems to be that *Nature recognises the existence of no such law*. "The law of the squares" may possibly apply to the transmission of electricity freely along simple conducting wires, but *it certainly does not apply to the case of its transmission along submarine or subterranean gutta percha covered wire*, (the facility of transmission being estimated by rate of speed,) because in this the case is not one of simple conduction, but of transmission after the wire has been charged inductively to saturation as a Leyden jar.

FINAL EXPERIMENTS.

It having now been thoroughly determined by direct experiment, that retardation of movement, in consequence of increasing distance *did not* occur at a rate which could seriously affect success, where such an extent as the breadth of the wide Atlantic is concerned; that increased dimensions in insulated marine conductors augmented the difficulties to be contended with in respect to mere velocity of movement, instead of removing them, so that unwieldy and unmanageable bulk in a long cable, at any rate, could *never be required*; and that, *by employing the induced* magneto-electro current, and reversing the quality of the electricity transmitted at each signal, a velocity and facility of work might be attained in the longest circuits, which would satisfy all mere commercial and financial requirements, in such a line as one crossing the Atlantic; the conclusion, in short, having been arrived at, that there was no royal road for telegraphing electricity through the ocean, either upon the base of material bulk in the conductor, or of intensity in the agent, but that the whole affair necessarily resolved itself into one in which symmetry and proportion of arrangements had to be looked to; the well considered and carefully-effected adaptation of part to part, of length and size of insulated wire to the amount of work to be done, and of quantity of the agent to the length and size of the wire, and to the necessity of continued reversal and alternation of the currents passed through it. All this having been settled, it now only remained to *actually record* a signal through two thousand miles of circuit, a length which might be assumed to be about that which would be conceived in the passage of the Atlantic. In the last year arrangements were made, through the kindness of the Directors of the English and Irish Magnetic Telegraph Company, to secure this final proof. The experiments were planned and carried out conjointly by Mr. CHARLES BRIGHT, the engineer of the Magnetic Company, and by Mr. WILLIAM WHEATSTONE. The underground wires belonging to the works of this Company extend, as has been already stated, from London through Dumfries to Dublin, and they are 660 miles in length. They are also so numerous and so abundantly connected with ramifications, that a continuous length of not less than five thousand miles can be made up among them. Every possible precaution was taken in the conduct of this trial to guard against incidental causes of error by the introduction of test instruments at each available point of junction; and to crown the whole, the veteran electrician, Professes MORSE, of the United States, was present at the operations and witnessed the result. The whole of the circuit which was employed upon this occasion consisted of subterranean or submarine wires. This was the closest approach to the working of a lengthened submarine line which could be obtained, and the arrangements were perfectly satisfactory, because experiment has shown that the conditions which are present in insulated wires placed under the ground and beneath the sea, are strictly analogous, if not actually identical.

On the night of the 9th of October, 1856, the conclave of experimenters met at the offices of the Magnetic Telegraph Company, in Old Broad-street, London, and the hours of ordinary repose were spent in carrying out the investigation which had been planned. The result was an unquestionable triumph. Ten gutta-percha covered insulated wires, each measuring more than 200 miles, were connected, so that one continuous circuit of above 2,000 miles was formed, the coils of fine wires introduced for experimental purposes at the joints of the wires, further increasing the circuit virtually to the amount of 2,800 miles. The magneto-electric induction coils of Mr. WHEATSTONE were used to excite the wires, and the current was made to operate by means of receiving apparatus, upon one of Professor MORSE's ordinary recording instruments. Signals were distinctly and satisfactorily telegraphed through the two thousand miles of wire at the rate of 210, 241, and upon one occasion, 270 per minute. No more emphatic expression of the importance of the result of this experiment could perhaps be given, than the simple statement of the impression which was made upon the mind of the highly qualified and experienced American investigator, who was present as a witness. Shortly after the trial, Professor MORSE wrote to the distinguished friend and advocate of Atlantic telegraphy, Mr. CYRUS FIELD, in the following words: "There can be no question but that, with a cable containing a single conducting wire, of a size not exceeding that through which we worked, and with equal insulation, it would be easy to telegraph from Ireland to Newfoundland, at a speed of at least from eight to ten words per minute. Take it at ten words in the minute, and allowing ten words for name and address, we can safely calculate upon the transmission of a twenty-words' message in three minutes. Twenty such messages in the hour; four hundred and eighty in the twenty-four hours; or fourteen thousand four hundred words per day. Such are the capabilities of a single-wire cable, fairly and moderately computed. It is, however, evident to me that by improvements in the arrangement of the signals themselves, aided by the adoption of a code or system constructed upon the principles of the best nautical code, as suggested by Mr. WHEATSTONE, we may at least double the speed in the transmission of our messages. In one word, the doubts are resolved; *the difficulties are overcome; success is within our reach; and the great feat of the century must shortly be accomplished!*"

PRINCIPLES AND FACTS ESTABLISHED.

Towards the close of last year, therefore, the electrical element of wide ocean telegraphy had assumed this phase. Science had then shown:

That gutta percha covered submarine wires do not transmit as simple insulated conductors, but that they have to be charged as Leyden jars, before they can transmit at all.

That, consequently, such wires transmit with a velocity that is in no way accordant to the movement of the electrical current in an unembarrassed way along simple conductors.

That magneto-electric currents travel more quickly along such wires, than simple voltaic currents.

That magneto-electric currents travel more quickly when in high energy than when in low, although voltaic currents of large intensity do not travel more quickly than voltaic currents of small intensity.

That the velocity of the transmission of signals along insulated submerged wires can be enormously increased, from the rate indeed of one in two seconds, to the rate of eight in a single second, by making each alternate signal with a current of different quality, positive following negative, and negative following positive.

That the diminution of the velocity of the transmission of a magneto-electric current in induction-covered wire, does not in the inverse ratio of the squares of the distance traversed, but much more nearly in the ratio of simple arithmetical progression.

The several distinct waves of electricity may be traveling along different parts of a long wire simultaneously, and within certain limits, without interference.

That large coated wires send towards the water of the earth are worse conductors, so far as velocity of transmission is concerned, than small ones, and therefore are not so well suited as small ones for the purpose of submarine transmission of telegraphic signals; and

That by the use of comparatively small coated wires, and of electro-magnetic induction-coils for the exciting agents, telegraphic signals can be transmitted through two thousand miles with a speed amply sufficient for all commercial and economical purposes.

ORGANIZATION OF THE PRESENT COMPANY.

Upon this electrical basis, the question of oceanic telegraphy was standing when the present momentous year dawned. But the interests of the cause had then been greatly advanced through other agency. The Incorporated New-York, Newfoundland, and London Telegraph Company, which had given all the weight of its influence to the stimulation of preliminary investigation, in the summer of 1854, deputed their Vice-President, Mr. CYRUS W. FIELD, who had indeed been in the main instrumental in obtaining the charter from the Government of Newfoundland, to visit England, with a view to the effecting of such arrangements, as were best fitted to advance the undertaking. The consequence of this visit was the formation of the existing Atlantic Telegraph Company, comprising the holders of 350 shares of one thousand pounds each, and having Mr. BRIGHT and Mr. WHEATSTONE, who had taken *such prominent parts in the preliminary proceedings* of investigation, as their advising and acting engineer and electrician. The services of these gentlemen were at once secured, in the conviction that in no other way could the success of the enterprise be so materially aided. The charter of the New-York, Newfoundland, and London Company, conferring upon it the exclusive right to land telegraph cables on the shores of Newfoundland and other parts of North America, and for 25 years to do the same thing on the shores of Nova Scotia, was then made over to the New Company, together with all concessions bearing upon the undertaking which may be hereafter obtained, and all the patent rights of Messrs. WHEATSTONE and BRIGHT, which in any way concerned the working of instruments in marine circuits of great length were prospectively secured to it. In order that the capital subscribed might be entirely applied to the immediate object of the undertaking, the projectors, Messrs. BRIGHT and FIELD, and Messrs. BRIGHT and WHEATSTONE, considerably arranged their compensation for the privileges assigned, and for past expenditure and exertions should be left entirely dependent on the successful result of the undertaking. The final agreement with these gentlemen was that upon attaining success, *a half-yearly dividend of ten per cent. per annum on the capital should first be paid to the shareholders, and that then one-half of any further profit should be given to them*, and the other half be retained by the Company, it having been estimated upon a very moderate computation of the probable amount of revenue, conjoined with a consideration of the comparatively small working expenses where there can only be two terminal stations to be maintained, that a very satisfactory result might be secured to all parties upon this ground.

REMAINDER IN THE TIMES OF TO-MORROW MORNING.

List of Patents

Issued from the United States Patent Office, for the week ending Aug. 25, 1857, and all bearing that date.

Wm. W. Ayres, of Worcester, Mass.—For improved filter.

Moses S. Beach, of Brooklyn, N. Y.—For machine for wetting and cutting paper for printing presses.

Elihu Bliss, of Newark, N. J.—For combination of watch keys with finger rings.

Joseph Booth, of Newark, N. J.—For improvement in machinery for manufacturing hat bodies.

Wm. Borrman, of Cincinnati, Ohio—For improved method of hermetically sealing cans.

Sheldon Chaffield, of Derby, Conn.—For improvement in umbrellas and parasols.

John Carpenter, of Stonington, Conn.—For improved device for piercing blind slats to receive the staples.

Thos. J. Chubb, of New-York, N. Y.—For improvement in separating ore.

Pearson Crosby, of Fredonia, N. Y.—For improved swage for setting saw teeth.

P. S. Devlan, of Reading, Penn.—For improvement in brick machine.

Hiram F. Everitt, of Benton, Penn.—For improvement in washing machines.

Wm. R. Farrar and Jonathan H. Farrar, of Evans' Mills, N. C.—For improvement in self-waiting tables.

Thaddeus Fowler, of Waterbury, Conn.—For improved pin-sticking machine.

Henry Getty, of Brooklyn, N. Y.—For improvement in ships' berths.

Wm. M. Hammond, of Jonesville, Mich.—For improvement in washing machines.

Chas. H. Hinckley, of Stonington, Conn.—For improved method of rendering the mouths of of trunks, mail bags, &c., water-tight.

Wm. Jones, of Speedsville, N. Y.—For improvement in hay and manure forks.

Lucius J. Knowles, of Warren, Mass.—For improvement in steam pressure regulators.

Theodore T. B. Laidley, of the U. S. Army—For improved projectile for rifled cannon.

Justin Loomis of De Ruyter, N. Y.—For improvement in washing machines.

Philip W. Mackenzie, of Jersey City, N. J.—For improvement in cupola furnaces.

Pells Manny, of Waddams Grove, Ill.—For improvement in the cutting apparatus of harvesters.

Charles E. Marwick, of Portland, Me.—For improvement in ships' capstans.

Wm. Moultrie, of New-York, N. Y.—For improvement in water vessels, for imparting humidity to hot air, and vapor draft to the grate bars of hot-air furnaces.

Samuel Pierce, of Troy, N. Y.—For improvement in cooking ranges.

Paul Prestch, of the Empire of Austria—For Photo-galvanographic process for printing.

Emmett Quinn, of Trenton, N. J.—For improved boring machine.

Lewis Raymond, of New-York, N. Y.—For improved bending machine.

Samuel Richards, of Philadelphia, Pa.—For improvement in glass furnaces.

Thomas Robjohn, of New-York, N. Y.—For Inkstand.

Edwin A. Schoffield, of Westerly, R. I.—For improvement in looms.

Isaac A. Sergeant, of Springfield, O.—For improvement in washing machines.

Gerard Sickles, of Brooklyn, N. Y.—For improvement in the packing of rotary steam engines.

Wm. Pierce Thomas, of Whitewater, Ind.—For improved fence for poultry yards.

Jno. Toulmin, of New Worcester, Mass.—For improvement in vibrating shears.

Stephen Woodard, of New-London, N. H.—For improved method of clamping logs in cross-cut sawing machines.

Abram Wood, of Camden, N. Y.—For improvement in washing machines.

Wm. Wickersham, of Boston, Mass.—For improvement in sewing machines.

Jno. Brokaw, of Springfield, O., assignor to Warder, Brokaw and Child, of same place.—For improvement in automatic rakes for harvesters.

Henry Bohn, of New-York, N. Y., assignor to himself and Thos. Sewell, of same place.—For improvement in sewing machines.

Samuel Larkin, of Bridgeport, Conn., assignor to the Wheeler & Wilson Manufacturing Company, of same place.—For improvement in sewing machines.

Charles H. Seyre, of Utica, N. Y., assignor to himself and Samuel Remington, of Ilion, N. Y.—For improvement in cultivators.

Wm. W. Willmott, of Boston, Mass., assignor to himself, Amos H. and Charles H. Brainard, of same place.—For improvement in boot crimps.

C. P. Wiggins, A. H. Nordyke and Benj. Strawbridge, of Richmond, Ind.—For machine for folding paper.

REISSUES.

Edward Campbell, of Columbus, Ohio—For improvement in glass journal box.

Joseph Dunkley, of Carrollton, Mo.—For improved automatic regulator for wind wheels.

Wm. E. Treadwell and Wm. Bustace, executors of E. Treadwell, deceased, late of New-York, N. Y.—For improvement in ovens.

John Schaffer, of West Manchester, Penn.—For improvement in capstans for steamboats.

DESIGNS.

Thomas Barry, of New-York, N. Y.—For design for stoves.

Samuel H. Ransom, of Albany, N. Y.—For design for stoves.

Pietro Cinquini, of West Meriden, Conn.—For design for clock-case front.

G. W. Shall and Charles Stewart, of Cincinnati, Ohio—For ornamental design for brick.

Thomas D. Worrall, of Lowell, Mass.—For design for stoves.

SALE OF THE CHOCTAW ORPHAN LANDS OF MISSISSIPPI.—The Secretary of the Interior transmitted yesterday morning to the Commissioner of the General Land Office a complete list of the reverted and acquired Choctaw orphan lands in the State of Mississippi which remained unsold on the 17th inst., requesting him to forward it to the Register and Receiver of the Land Office at Grenada, Mississippi, with instructions for its publication in a number of the newspapers of that State.

Sealed proposals for the purchase of any tract or tracts of these lands, at a price greater than the valuation thereof, will be received at the Land Office at Grenada, until the first day of November next. Any tract for which the same price may be offered by two or more bidders, above the valuation price, may be purchased by the bidder offering the highest price therefor. Upon the approval by the President of sales made in this way, patents will be issued by the Department.

Those lands for which no proposals shall be received will be sold at the valuation price affixed thereto on and after the first day of November. A similar course is required for these sales in order to obtain patents.

These lands will be sold for the benefit of Choctaw orphans.—*Wash. Union.*

THE COMET DISCOVERED BY DR. PETERS.—The Comet discovered by Dr. PETERS, at the Dudley Observatory on the 25th July, was seen at the Imperial Observatory, Paris, on the 28th, and at Gotha and Altona on the 29th. This establishes the priority of the discovery for the Dudley Observatory. Dr. PETERS proposes to give the name of the "Olcott Comet" to his discovery.—*Albany Argus.*

IMPORTANT FROM KANSAS.

TRIAL OF GOV. ROBINSON.

Charge of Usurpation of Office—Disagreement of the Jury.

Correspondence of the Missouri Democrat.

LAWRENCE, Monday, Aug. 17, 1857.

Gov. ROBINSON was tried on Monday, Tuesday and Wednesday, for a misdemeanor known as usurpation of office. That office was Governor of the State of Kansas.

Gov. ROBINSON appeared in Court.

A Jury was empanelled. Mr. PARKER, counsel for Gov. ROBINSON, challenged the array.

The laws require that the Jury shall be equally selected from every part of the District. These men were all residents of Lecompton.

The most ultra Pro-Slavery men had been selected. Sheriff JONES was the first man called.

The Judge, CATO, overruled Mr. PARKER's challenge. The counsel took exception.

The Jury was packed and the case proceeded.

The indictment was read. Gov. ROBINSON pleaded not guilty.

I was not present at the trial, but my information is obtained from prominent actors in it.

Mr. WILM argued that as the Battle of the "State of Kansas" corresponded with the boundaries of the Territory of Kansas, it was to be presumed that any Legislature which passed laws for the State assumed jurisdiction over the Territory, and that any man elected as Governor of the State intended to usurp the office of Governor of the Territory.

The only witness who appeared was J. M. TUTON. Mr. TUTON is a native or an emigrant from Missouri. He was elected as a member of the Constitutional *Convention. He was a representative, also, in the* State Legislature. He was an officer in the Wakarusa war. He is a clergyman. He made one speech, I remember, in the Constitutional Convention on the expediency of permitting colored people to emigrate to Kansas, in which he used the memorable expression, "I don't want any black tuck niggers, Mr. President, a trampin' over my grave!" This seemed to be his chief argument in favor of excluding free blacks. He "fell from grace" last Summer and became very obnoxious to his former friends. He has lived chiefly in Lecompton. He was caught by some boys a few months ago, stripped naked, whipped, and tarred and feathered. He testified that Gov. ROBINSON had taken the oath of office. He said that the Legislature had passed a bill defining the salaries of officers and stated that the Governor had signed it. On cross examination, he could not swear that the Governor had signed it. He had not seen him sign it. His evidence on this point was therefore objected to. Judge CATO overruled the objection! Did you ever hear of such ruling outside of Kansas! The witness stated, also, that the understanding in the Constitutional Convention was that the State Government should not go into operation until Kansas was admitted into the Union under the Topeka Constitution.

Mr. G. W. BROWN, editor of the *Herald of Freedom*, was a witness for the prosecution, but his evidence was not produced.

The defence called no witness. TUTON had testified to the fact that they wished to establish. He had sworn that there was no design to set the Government in operation until the State was admitted into the Union.

Judge CATO's charge to the jury is said to be a remarkable document. He told them that if they found that ROBINSON had usurped the office of Governor of the State of Kansas, to find him guilty.

The jury retired, and were in session all night.

The penalty for the offence is imprisonment for any time under a year and a fine of any sum under five hundred dollars.

Gov. ROBINSON, if convicted, will refuse to pay.

A letter in the Cincinnati *Gazette*, dated at LAWRENCE on the 18th, states that the Jury in Governor ROBINSON's case were unable to agree:

"Governor ROBINSON returned from Lecompton this evening. His trial in Cato's Court was concluded about noon, and the case was submitted to the Jury, who are all Lecompton men, and Pro Slavery. They were out all the

NEW-YORK LIVE STOCK MARKET.

Prepared every week, expressly for the New-York Daily Times, Semi-Weekly, and Weekly Times, by a special and experienced Reporter.

WEDNESDAY EVENING, Aug. 26, 1857.

The principal Market Places are the WASHINGTON GROVE YARDS, 44TH-STREET, Brewster's, on Ninth-street; Chamberlin's, on Robinson-street; and O'Brien's, on Ninth-street. One or more yards are held every market day. Irregular sales are sometimes made at Bergen Hill, N. J., and from the Hudson River Boats.

The great sales day is at the Washington Yards is on WEDNESDAY of each week. The reports from all the yards are made up for the preceding week to the evening of each day.

RECEIPTS OF AVERAGE BEVES PRINCIPAL MARKETS, FOR THE THREE MONTHS AUG. 25, 1857.

YARDS.	Beeves.					Cows.	Veals.
	Texas.	Illinois.	Ohio.	Total.	Last Week.		
Washington Grove-Yards, 44th-street	2014	2216	45	410	1276	1289	
Brewster's, 9th-street	.....	110	80	120	772	.....	
Chamberlin's, Robinson-st	.....	106	51	111	9720	.....	
O'Brien's, 9th-street, other reputed all	.....	75	65	79	.....	.....	
Bergen	.....	800	.....	.....	.....	.....	
Total for week	.....	3707	241	711	12768	1289	
Last week	2564	3235	252	975	11434	1534	

Average weekly receipts of Beeves at the four Old Stations for the year 1856.....3,548

A. M. ALLERTON, proprietor, reports the animals at the Washington Grove-Yards received, as follows:

CONVEYANCE.	Beeves.					Cows.	Veals.
Erie Railroad	744	.....	.....	.....	.....	10	
Hudson River Railroad	191	.....	.....	.....	.....	80	
Hudson River Boats	1970	.....	.....	.....	.....	36	
Harlem Railroad	41	46	410	1276	.....	.....	
New-Haven Railroad	.....	.....	.....	.....	.....	.....	
Camden & Amboy R. R.	139	.....	.....	.....	.....	.....	
On Foot	.....	.....	.....	.....	.....	.....	

The receipts of Live Stock, by the Erie Railroad, during the week, ending this afternoon, were as follows:

Cattle	1122	Hogs	1011
Sheep	4200	Horses	18
Calves	194	Lambs	54

The Cattle at Forty-fourth-street were derived from the following sources:

Ohio	858	Massachusetts	—
New-York	348	Pennsylvania	—
Illinois	104	Texas	320
Kentucky	80	Connecticut	—
Indiana	84	Michigan	—
Virginia	—	New-Jersey	—
Iowa	—	Cherokee Nation	—

Beeves are sold by the estimated dead weight of the four quarters; the so-called "fifth quarter" (hide and tallow) is not reckoned in here as it is in Boston and some other cities. When cattle are weighed or estimated alive, the dead weight is reckoned at a certain number of pounds to the 100 lbs. of live weight, as agreed upon. The general rule in this market for medium cattle is 56 lbs. to the 100; 54 lbs. being allowed for the "fifth quarter" and offal.

The average prices to-day, as compared with last week, are about 1c. higher.

We quote:

PRICES OF BEEF AT FORTY-FOURTH-STREET.

	To-day.		Last Week.	
Premium Cattle	none		11¼c.	@12c.
First quality	12c.	@12c.	11c.	@11¼c.
Medium quality	11c.	@11¾c.	10c.	@11c.
Poor quality	10c.	@10¼c.	9c.	@10c.
Poorest quality	9¼c.	@10c.	8c.	@9c.
General selling prices	11c.	@12c.	10c.	@11c.
Average of all sales	11¼c.		10¼c.	

At BREWSTER'S, CHAMBERLIN'S and O'BRIEN'S prices do not materially differ from those at Forty-fourth-street. CHAMBERLIN reports Beeves at 9c.@11c. O'BRIEN reports Beeves at 8c.@11c. BROWNING reports Beeves at 10c.@11c.

REMARKS ON THE BEEF MARKET.

Another see-saw occurred at Forty-Fourth-street to-day—the prices going up as they went down last Wednesday, though not quite so fast. The present facilities for receiving intelligence at distant points by telegraph and in the full newspaper reports, enables dealers, as well as purchasers, to know the condition of the markets here during the same week, and often on the same or the next day. Of course, few will venture to send forward their cattle upon the heel of such a market as we had this day week. Only a few of the more experienced and daring venture to come in with cattle, excepting those whose droves are on the road and cannot be stopped. We have not unfrequently advised our readers that, usually of the best market immediately follows a very depressed one within one or two weeks, for the reason above given, viz., everybody stays away and a short supply is the consequence. This was the case to-day, so that only 2,216 were on sale at ALLERTON'S, and only 2,094 have been received in the City during the week past. This is about 500 less than the weekly average for 1856, while the cool weather and the advancing season conduces to a considerably increased demand for beef. Of the surplus here from last week quite a number have been taken into the country to be fed awhile, so that with the previous deficiency to be made good, about all in market last week were disposed of, and the demand to-day was quite equal to the supply. Prices went up in the morning and continued so through most of the day. At evening the yards were about cleared out. It is barely possible that there will be enough brought in to meet next week's wants.... A large proportion of the Beeves on sale at Forty-fourth street were thin, light steers, which needed longer grazing to make them fit for the butcher.... Some 300 TEXAS Cattle were brought in, having been forwarded after a very short grazing season in Illinois. Such Cattle need at least one year's feeding after leaving their wild pasture grounds, before they are fit for market, but the present high prices are bringing them forward too early. Those here to-day were driven from Texas only last Spring.... The "Bank panic" is not wholly confined to the Wall-street brokers, as some of the Cattle brokers experienced to-day by having the bills of eight banks heretofore in circulation among them thrown out by the money broker at Forty-fourth street. Like stock owners are usually very ready to take their money to the West with them after selling their Cattle, but they hesitated to-day, fearing it would not keep until they reached home, even on the fast trains.... About 300 Beeves were sold over the river.... From Albany about 500 Cattle went East to the Brighton market.

The following are the principal lots on sale to-day, including a few lots disposed of this evening:

No.	State.	Owner.	Salesman.
455	Ohio	D. J. Werner	Mead & Helcomb.
108	Illinois	Alexander & Co.	Owens.
108	Illinois	Alexander & Virgin	A. Murray.
110	Illinois	Jas. Alexander & Co.	A. Merritt.
108	Kentucky	A. Hurt	O. Hurd.
110	Tex. & Ill.	A. Gilbert	Westheimer & Bro.
97	Ohio	A. Whitaker	Miller, Harp & Gur.
102	Tex. & Ill.	R. Robinson	Long & Budlong.
64	Ohio	Beach & Lauterbach	Owners.
68	Ohio	S. M. Baker	J. H. Williams.
97	Ohio	Alberson & Conger	Owners.
100	Ohio	Wm. Fleming	T. White & Son.
90	Ohio	S. Lauterbach	Geo. Ayrault.
96	New-York	Geo. Sage	Owner.
94	New-York	P. Dorlan	Owner.
94	Ohio	Shepherd & Vail	Owners.
83	New-York	Stockholm	Wells & Hoxie.
97	New-York	L. D. Stevens	Owner.
112	Illinois	A. C. W. Marion	W. H. Harris.
92	Ohio	N. B. Faber	Geo. Ayrault.
98	Texas	M. Fain	Wm. H. Belden.
90	Ohio	William Harmon	T. Wheeler.
85	Ohio	Wm. Fleming	Owner.
94	New-York	— Parks	Owner.
80	Illinois	Parrott & Clark	D. Barnes.
94	Illinois	J. T. Alexander	R. Murray.
90	Illinois	R. Rokstein	Owner.
97	Tex. & Ill.	Westheimer & Bro.	Owner.
102	Ohio	I. Bryant	O. G. Teed.
97	Ohio	S. M. Baker	R. Bartram.
82	New-York	W. Sherman	Owner.
81	New-York	W. Elliott	Owner.
89	New-York	J. Seaney	Owner.

We present, as usual, a few extracts from our copious notes of the transactions of this day:

S. RODRIGUE had 40 Texas and 92 Illinois cattle, which J. C. HEAD sold at 10c.@11c. They were common stock. C. GOODZE bought 32 of them for shipping, at $60 each, or about 11c.

EMORY & LAUTERBACK sold on their own account, 84 medium Ohio cattle, at 10c.@11c. Estimated net weight 615 lbs.

S. M. BAKER had 117 Ohio steers of common to medium quality, which he divided between J. H. WILLIAMS and S. BARNUM, on commission. Estimated 650 lbs. net and selling at 10c.@11c.

WM. FLEMMING's drove of 96 Durham grade steers of the own breeding, was perhaps the best lot in market. They were raised 700 lbs. net, and sold by T. WHITE & Son at 11c.@12c. Of course they were bought to-day in the absence of prominent cattle.

J. BEAGLY had some of the same quality selling by C. G. TEED at 12c.@12c. His drove consisted of 102 Ohio steers, which he had fitted good, and took them at an average of about 12½c.

ALLERTON & COWGILL, wholesaled 86 good Illinois steers yesterday at 11½c. They were raised in Ohio steers at 11½c. on 675 lbs. estimated net weight.

D. J. WERNER consigned 455 Ohio steers from Adams County, to Mead & Helcomb. They were sold by Mead & Helcomb at 11c.@11½c. per lb. net, for 9 12c. W. H. Allerton sold a smaller lot at the same price, per lb. net, or a little under 10½c. Prices were retailed to day at about 1c. advance.

BROWNING & BRADLEY bought 85 of Fleming's cattle, which he resold to 11c.@12c. Raised at 650 lbs.

ABERNATHY & VIRGIN forwarded 94 Illinois steers, which ranked very fair in comparison with the general quality in the market. R. MURRAY, salesman, sold them 11c.@11¾c., with an estimate of 650 lbs. net.

JAMES T. ALEXANDER & Co. contributed 110 very good Illinois cattle, which weighed 1,400 lbs. at home. J. K. SPRAGUE sold them at about 12c. average. This was a high figure for so large a lot, and shows the material of which they were made. Buyers of good beef visited his yard, and among others, WM. MOORE took 12 head at 8¾c. on 12¾c. buyer's estimate.

D. TARCLIFFE contributed 80 medium steers from Highway County, Ohio, which T. WHITE sold at 11c.@12c. Home weight 1,235 lbs. grass.

A. C. W. HARRIS forwarded 112 more of his Illinois Cattle, similar in quality to those of last week. W. H. HARRIS sold them at about 9¾c., mostly being light, thin stock.

ALEXANDER & VIRGIN bought on 90 Texas and 50 Illinois Cattle, which he bought at Chicago and reached this market with it at expense of about $10 ⅌ head. The prices obtained to-day by WESTHEIMER & BROTHER were entirely satisfactory to him, being about $54 ⅌ head. Raised 650 lbs. net. The Texans were thin and light.

MILCH COWS AND CALVES.

Milch Cows are sold at each of the above yards, usually with their Calves at their sides. The prices vary somewhat with the supply and demand, and very greatly of course upon the milking value. The particular fancy of the buyer has also considerable to do with the price. Not unfrequently a Cow is sold at $60@$65, and even $150. The general price throughout the year for ordinary Cows is $40 to $50 or $60. Quite a number sell above $60, and more, perhaps, below $60. We often see apologies or Cows go at $30@$35. The weekly reports from the different yards will give the weekly fluctuations.

The demand for good fresh Cows is slightly increasing. The market continues supplied.

ALLERTON reports receipts of 45 Milch Cows, selling at $35@$50 for common, $55@$65 for good, and $55@$70, for extras. Market fully supplied and sales slow.

BROWNING reports receipts of 54 Milch Cows, selling at $25@$50 for common, $30@$40 for good, and $50@$65 for extras. Market fully supplied, with a little more briskness.

CHAMBERLIN reports 51 Milch Cows, selling at $25@$65 for common; $30@$50 for good; and $50@$75 for extras. Short supply, with a fair demand.

O'BRIEN reports 60 Milch Cows, selling at $35@$65 for common, $40@$50 for good, and a few at $60@$70. No alteration in the market. Sales continue dull, with just enough offering to meet the demand.

VEAL CALVES.

Veal Calves are sold by live weight, each animal being weighed alive at the time of sale. "Bobs"—that is, Calves a few days old—are usually sold by the head at such prices as can be agreed upon, sometimes for but little more than the skin is worth. The principal places of sale are ALLERTON's, BROWNING's, CHAMBERLIN's and O'BRIEN's.

The receipts give a falling off of some 300 head from last week's figures, and prices are advancing a little. Good Veals bring 7¾c.@8c., at a quick market.

ALLERTON reports receipts of 410 Veal Calves, selling at 6¾c.@7¾c. Some extra brought 8c. There is a brisk demand, which is not met by the diminished supply.

BROWNING reports receipts of 120 Veal Calves, selling generally at 5¾c.@7½c, and a few extras at 8c. Market well supplied, and selling readily.

CHAMBERLIN reports receipts of 111 Veal Calves, selling at 6c.@8c. The receipts have not been equal to the demand, and prices are firmer.

O'BRIEN reports 70 Veal Calves, selling at 6c.@7c. Extras 7¼c.@7½c. A medium supply, with a brisk market.

SHEEP AND LAMBS.

These are chiefly sold at ALLERTON's, BROWNING's, and CHAMBERLIN's, at so much ⅌ head for a particular lot of Sheep or Lambs, or of the two together. They are also frequently sold by live weight, as this is readily ascertained. The actual prices at the different yards seldom vary greatly. The difference in reported prices is generally due to variation in the quality. When they are sold by weight, it is usually the net weight, which is ordinarily one half what they weigh when alive, the pelt and offal making the other half. If fat and small-boned, they will dress 55 lbs., and in some cases 60 lbs., ⅌ hundred. The average run is about one-half the live weight. The receipts for the past week have reached a higher figure than for a long time previous. A very large proportion of these were lambs. Many of them light and thin. The market is at present overstocked and some sell at low prices. Sheep in good condition sell well.

ALLERTON reports receipts of 1,275 Sheep and Lambs, selling at 9c.@10¾c. ⅌ lb. dressed weight, for Sheep, and 8c.@12½c. ⅌ lb. for Lambs. Receipts have been free, and sales fair, although Lambs are not bringing quite as much as last week, owing partly to their poor quality. Good sheep are in demand.

BROWNING reports receipts of 7,128 Sheep and Lambs, selling generally at 8¾c.@10¾c. net for Sheep, and 10c.@12½c. for Lambs. Receipts for the past week have been very large, larger than for any previous week during several years past. A large proportion have been Lambs, many of which were light and thin. Some in the pens now were left over from last week. About 1,900 on sale to-day. Prices have declined. Sheep are in fair demand.

CHAMBERLIN reports receipts of 4,859 Sheep and Lambs, selling at 9c.@10¾c. ⅌ head. Market well supplied and stock selling fair.

REPORTS OF BROKERS' SALES AT BROWNING'S FOR WEEK ENDING AUG. 26, 1857.

SAMUEL MCGRAW reports sales of

101 Sheep and Lambs at	$565 75
106 Sheep and Lambs at	415 25
101 Sheep and Lambs at	873 75
33 Sheep and Lambs at	87 00
117 Sheep and Lambs at	428 00
103 Sheep and Lambs at	368 00
28 Sheep and Lambs at	107 00
90 Sheep and Lambs at	345 75
67 Sheep and Lambs at	299 75

HUKE & ELLIOTT report sales of 1,550 Sheep and Lambs for $7,807 76.

JAS. BALDWIN reports as follows:

158 Sheep and Lambs at	$633 25
66 Sheep and Lambs at	275 90
35 Sheep and Lambs at	122 50
38 Sheep and Lambs at	132 60
28 Sheep and Lambs at	72 75
105 Sheep and Lambs at	458 56
100 Sheep and Lambs at	448 75
48 Sheep and Lambs at	193 75
98 Sheep and Lambs at	344 75
125 Sheep and Lambs at	530 25
66 Sheep and Lambs at	271 00
150 Sheep and Lambs at	624 00

THOMAS C. LARKIN reports sales of

113 Sheep and Lambs at	$493 1
75 Sheep and Lambs at	287 50
22 Sheep and Lambs at	90 75
94 Sheep and Lambs at	420 00
151 Sheep and Lambs at	650 00
29 Sheep and Lambs at	132 00
91 Sheep and Lambs at	396 50
61 Sheep and Lambs at	218 50
78 Sheep and Lambs at	316 00

SALES OF SHEEP AND LAMBS, BY S. JUDD, AT CHAMBERLIN'S, FOR THE WEEK ENDING AUG. 26, 1857.

No.	Account	Average	Price.
10 Sheep sold for	$40 00	$4 00	
80 Lambs sold for	220 00	2 75	
60 Lambs sold for	157 50	2 62½	
242 Sheep sold for	678 00	2 80	
120 Sheep sold for	600 00	5 00	
168 Sheep sold for	666 00	4 26	
16 Sheep sold for	60 00	3 75	
156 Lambs sold for	409 50	2 62½	
37 Sheep sold for	138 75	3 75	
200 Sheep sold for	1,000 00	4 50	
151 Sheep sold for	855 82	5 62½	
981 Sheep sold for	3,500 50	4 25	
50 Sheep sold for	250 00	5 00	
1,731 Sheep and Lambs sold for	$4,556 15	$3 81	

SWINE.

These are sold alive at so much ⅌ lb. gross or live weight. Considerable numbers are sold at ALLERTON's, Forty-fourth-street, and at various other yards, while large droves are sold direct from the cars or boats, and driven immediately to the various slaughter houses.

With light receipts the market closed firm, exhausting the stock at an upward tendency.

ALLERTON reports receipts of 1,866 hogs during the past week. Prices for live hogs ranged during the week at about 8c., for what were offered, being mostly perhogs. There is a demand for good stock at high rates.

VAN BRUNT & WARNOCK, Pork-packers, No. 200 Chambers-street, report prices as follows:

CORN-FED.

Live.....8@8¼ | Dressed.....10¼@10¾

DISTILLERY.

Live.....8 | Dressed.....10 @10¼

Arrivals light.

G. W. DOREMUS, commission merchant, Nos. 5 and 6 Centre Row, West Washington Market, reports:

Heavy Corn Hogs, from	8 @ 8¼
Light Corn Hogs, from	7¾@ 8
Heavy Distilled Hogs, from	7¾@ 8
Stock Hogs, from	7¼@ 7¾

The arrivals of Hogs are light, and prices exhibit an upward tendency. Markets cleared up.

Wholesale Produce Markets.

Reported exclusively for the New-York Daily Times.

WEDNESDAY EVENING, Aug. 26, 1857.

The prices given in our report from week to week are the average wholesale prices obtained by producers, and not those at which produce is sold from the market. The variations in prices result chiefly to the qualities of the articles.

The Vegetable Market has been well supplied for the past week, and fruits are coming in more freely.

Potatoes are a little firmer, in consequence of a decrease of rot in many localities and the less rush to the market. They are still rotting in some parts of New-Jersey and on portions of Long Island. Sweet Potatoes give promise of a good yield. Delaware is now sending in some very fine.

Apples are still scarce and poor, although bringing high prices. The crop is evidently short at the East, but a report elsewhere.

Peaches are now coming from Delaware in good condition, and will be in season for a few days yet.

Pears are quiet at former prices.

Grapes are in good condition, and will be in season for a few days.

Melons are in good condition, and will be in season for a few days.

Poultry is tolerably good, and at the full prices of the week.

Markets.—*Carefully reported for N.Y. Daily Times.*

NEW-YORK, Wednesday, Aug. 26, 1857—5 P. M.

ASHES—Are in demand and are firm. Pearls, $7 31¼; Pots, $6 ⅌ 100 lbs. Stock in the Inspection Warehouse 761 bbls. including 631 bbls. Pearls, and 209 bbls. Pots. Saleratus, 7¾c.; Soda ash, (60 ⅌ cent.) 5c.@5¼c. ⅌ lb.

BOOTS AND SHOES—The demand is more animated, chiefly for work adapted to Southern markets; but factors have readily met the requirements of their customers, at, in most instances, somewhat easier prices. We now quote: Men's thick and clump boots, $2@$2 75; Boys' do., $1 50@$1 75; Youths' do., $1 25@$1 75; Men's russet brogans, $1 15@$1 40; Boys' do., 90c.@$1 10; Men's thick do., $1 10@$1 50; Boys' do., 90c.@$1 15; Youths' do., 75c.@90c.; Men's kip and split brogans, 90c.@$1 35; Boys' do., 80c.@$1 10; Youths' do., 60c.@90c.; Women's calf and kip boots, 90c.@$1 10; Misses' do., 75c.@90c.; Children's do., 50c.@60c.; Women's kip, goat and kid boots, 90c.@$1 10; Misses' do., 70c.@80c.; Children's do., 50c.@60; Ladies' fine city made gaiters, $1 25@$1 75; Ladies' fine Eastern made gaiters, 90c.@$1 25; Ladies' city made kid boots, $1 12½@$1 37; Ladies' city made buskins and slippers, $1@$1 25; Misses' fine boots, 90c.@$1 10; Children's fancy shoes, 40c.@60c.

CANDLES—Are inactive, yet stiffly held.

COAL—Is in rather better request at previous quotations: Liverpool Cannel, $10 50@$11; Liverpool Orrel, $8 50@$9; Sidney, $5 25 ⅌ chaldron; and Anthracite, $5 50@$6 ⅌ ton of 2,240 lbs.

COFFEE—A public sale of Rio was held to-day, at which 3,695 bags changed hands at 10¾c.@12¾c., averaging 11¾c., a decline of ⅞c.@¾c. Since the sale, 1,300 bags sold on terms not made public; also, 150 do., 10¾c.@11¾c.; 150 Maracaibo on private terms, and 950 mats Java, 14½c., usual terms.

COPPER—Is moderately inquired for at our quotations: New Sheathing, 28c.; Yellow do., 23c.; Old do., 22c.@22½c.; American Ingot, 24½c.@25c.; Gulf Pig, 23½c.@24c.; Bolts, 30c.; Braziers', 32c., ⅌ lb.

CORDAGE—American made Manila, 10¼c.; Russia Bolt Rope, 12c.@14c. ⅌ lb.

COTTON—The market continues very fair, with sales of 400 bales at 15¾c. for Middling Uplands; 15½c. for Mobile, and 16c. for New Orleans.

DRY GOODS—This branch of trade exhibits increased animation. The demand is quite vigorous for the leading domestic fabrics,—which generally command strengthening prices, though the improvement in the value of manufactured goods is not important,—compared with the rise in the prices of the raw materials. Foreign goods are in pretty brisk request, but the supply is large, and many importers are eager sellers,—hence, there is much irregularity and some depression in the market.

FISH—Dry Cod are plentiful, and are less sought after, at from $3 50@$4 12½ ⅌ cwt. Pickled Cod, $4 ⅌ bbl. Mackerel are in good demand and are firm at $18 for No. 1; $16@$17 25 for large No. 2, and $3 50@$9 25 for medium do., ⅌ bbl. Pickled Salmon are dull and are nominal in price. Smoked Herring are saleable and steady at 50c. for scaled, and 20c. for No. 1, ⅌ box. Pickled Herring are pretty freely dealt in, and are worth from $3 50@$3 87½ ⅌ bbl.

FLOUR—The market for State and Western Flour is dull and unsettled, with more eagerness to sell than to buy. The demand is tame, coming mainly from home dealers, who purchase only such lots as they immediately require, anticipating a further decline in prices. The transactions since our last comprise about 5,000 bbls., in lots, at prices within the annexed range.

Ordinary State	$5 00@$5 10		
Straight State	5 15@	5 25	
Extra State	5 40@	5 50	
Superfine Indiana and Michigan	5 00@	5 25	
Superfine Ohio	5 10@	5 25	
Extra Indiana and Michigan	5 40@	5 50	
Extra Ohio	5 50@	5 25	
Fancy Genesee	5 70@	5 80	
Extra Genesee	5 90@	5 00	
Extra Missouri	5 15@	5 75	

Canadian is depressed and declining. Sales, 500 bbls. ordinary superfine at a choice extra at from $5 05@$5 10 ⅌ bbl. Southern Flour is heavy, but prices are without material change. Sales, 1,000 bbls. at $5 30@$5 50 for common to choice superfine, and $7@$7 50 for fancy to best extra. Rye Flour is lower; sales 200 bbls. at $3 90@$3 95 for common fair to choice superfine. Corn Meal unchanged; sales 100 barrels Brandywine at $4 30@$4 50.

FRUIT—The market is rather quiet for the leading articles; prices, however, exhibit no important variation.

GRAIN—Wheat is heavy, but prices are unchanged. The demand is fair for home consumption, and there is also a moderate export inquiry. Sales of 11,100 bush. new White Southern at $1 38@$1 70; 92,000 Red Southern, at $1 40@$1 44; 1,500 mixed do. at $1 35; 300 Red Kentucky at $1 42, and 2,000 unsound Red and White Southern at $1@$1 37. Rye is dull and lower. Sales of 2,000 bush. new, to arrive soon, at 85c. Barley is heavy. Several parcels are reported sold, for forward delivery, at $1@$1 10 ⅌ bush. Corn is in fair demand, at a shade better price. Sales of 44,000 bush. mixed Western at 85c.@86c., (chiefly at 85c.@85½c.,) and 20c.@81c. for Southern Yellow. Oats appear steady, with a fair business doing at 57c.@60c. for State, and 60c.@63c. for Western.

HAY—About 800 bales River changed hands at 75c.@90c. ⅌ 100 lbs.

HEMP—Is inactive at old quotations; American undressed, $160@$170; do. dressed, $210@$225; Italian, $240; Clean Russia, $230@$230; Jute, $117 50@$120; Sisal, 9½c.; Manila, 8c.; Sunn, 5c. ⅌ lb.

HIDES—Are lightly dealt in, and are rather heavy. Prime Buenos Ayres, 35½c.@36c.; Rio Grande, 34c.@34½c.; Orinoco, 30½c., Porto Cabello, 28c.@30c.; Dry Western, 24c.@26c.; Dry Southern, 20c.; Green Salted Western and Southern, 11½c.@12½c.; and City Slaughter, 11c.@12½c. ⅌ lb. Stock in first hands, 178,000, against 42,800 same time last year.

HONEY—Sales transpired of 30 bales last year's crop, at 7c.@11c. ⅌ lb.

IRON—About 70 tons Scotch Pig have been sold, in lots, at $29, usual terms, ⅌ ton.

LATH—Eastern, $1 18¾@$1 25 ⅌ M.

LEAD—Is in stock request, at our quotations: Foreign Pig, $6 ⅌@$6 37½; Galena, nominal, ⅌ 100 lbs.; Sheet and Bar, 6½c.@6¾c.; Pipe, 8½c.@7c. ⅌ lb.

LEATHER—Sole is somewhat brisker, yet not dearer. French Calf Skins and English salted Sheep Skins are unchanged.

LIME—Rockland: 70c. for common and $1 10 for Lump, ⅌ bbl.

LUMBER—Is in good request at full prices.

MOLASSES—Appears dull and heavy. Porto Rico, 50c.@60c.; Cuba Muscovado, 55c.@60c.; Clayed Cuba, 55c.@60c., ⅌ gallon.

NAILS—Cut, 3¼c., wrought, 5¾c.@6c. for German, and 6¾c.@7c. for American; American wrought horseshoe, 11c.@12c.

NAVAL STORES—Crude Turpentine continues scarce, and in request, at $4 ⅌ 280 lbs. Spirits Turpentine is plentiful and rather weaker, at 45c. Rosin is moderately dealt in at steady prices, at $1@$1 25 for common, $1 35 for No. 2, $1 50@$1 75 for No. 1, and $2@$2 75 for Window. Tar is in fair request, at $2 ⅌ barrel. Pitch is nominally at $1 ⅌ barrel. Rosin and Tar are quoted at $1 12½@$1 25 ⅌ bbl.

OIL CAKE—City this oblong, in bbls., $40@$42 50; in bulk, $30@$32 50 ⅌ ton.

OILS—Linseed, in fair request, at 60c.@62c. ⅌ gallon. Sperm, in good request, at $2 ⅌ gallon. Lard, in good request, at 90c.@$1 ⅌ gallon. Tanner's, in request, at 60c.@65c. ⅌ gallon. Whale, in request, at 35c.@37c. ⅌ gallon. Fish, in request, at 30c.@35c. ⅌ gallon. Castor, in request, at $1@$1 05 ⅌ gallon. Linseed, in request, at 60c.@62c. ⅌ gallon.

PROVISIONS—Pork is dull and prices rule in favor of the purchaser. Beef is steady in the demand for the trade and home market. The receipts and stock are very light, but there is no scarcity. The day's sales include 700 bbls. at $25 75 for Mess and $21 75 for Prime. Other lots are quiet and nominal. Prime Mess is nominally $26@$26 50. Cut Meats are in good request, with sales of small parcels at 9¾c.@10c. Western Smoked Bacon sells in a small way at 10c. Lard continues unsteady, with sales 100 bbls. at 14¾c.@16¾c. Butter is in fair request at 15c.@18c. for Ohio, and 19c.@22c. for State. Cheese is firm at 9c.@10c.

RICE—There were 150 tierces sold at $3@$3 75 ⅌ 100 lbs.

SALT—There is more doing, with sales of 1,600 sacks Jeffries & Darcy at 2,000 Ground; supposed at about $1 15@$1 18 ⅌ for the former, and 75c. for the latter. There were also sales of 10,000 bushels Turk's Island on private terms.

SALTPETRE—Crude, 10½c.@11c.; Refined, 8½c.@12c.; and Nitrate Soda, 4¾c. ⅌ lb.

SEEDS—The market is moderately active, and prices are supported for Clover and Timothy.

SHOT—Drop, 6¾c.; Buck, 7¼c. ⅌ lb.

SPELTER—Plates, 7¼c.@7½c. ⅌ lb.

SOAP—We have heard of sales of 125 boxes Castile, in lots, at 11¼c. ⅌ lb.

SPICES—Continue in moderate demand at our quotations: No. 1 Nutmegs, 65c.@70c.; Mace, 85c.@87½c.; Cassia, in mats, 40c.; Sumatra Pepper, 11½c., in bond, and 11¾c. free; Jamaica Pimento, 8¾c.@9¼c., in bond, and 9c.@9½c. free; Cloves, 10c.; Race Ginger, 5½c. ⅌ lb.

SUGAR—The market continues dull, and prices have further declined ⅛c., making a deduction of 1¼c. from the highest point of the season. Sales 650 hhds. Cuba Muscovado at 7¼c.@9¼c., including 500 at the inside price.

TEA—Is fairly dealt in at old rates. Souchong, 32c.@39c.; Strait, 34½c.@36c. ⅌ lb.; Fine, 1c.@$1 62½c.; $1 75; Finest, 1c.; Common Japan, $1 12½@$1 25; Fine, 1c.; Finest, 1c.; Young Hyson, 1c.@$1 25; Common, 1c.@$1 12½; Fine, 1c.@$1 25; Finest, 1c.@$1 37½; Gunpowder, 1c.@$1 25; Common, 1c.@$1 12½; Fine, 1c.@$1 25; Finest, 1c.@$1 37½.

TOBACCO—We hear of no transactions in this article of importance. The Inspection Returns are small.

TOYS—Are in good request at a shade better price.

PROVISIONS—P

[illegible]

[illegible] Thompson, Walnut-st., Brooklyn. Their prices are: Bath Brownstone, 25 cents; Bank Brownstone, 25 cents; Fustic, 20 cents, and Enkenhement one cent per cubic foot. The sales were trifling, including with the Trees, Benjamin B. Olney, Sedgwick, Hewes, Mendell & Wright, Moses, Ballwin & Coats, and Gamaliel Law. The local number of bids was 22.

Another grand attempt of sensation robbery this time on the Globe Bank, of Providence, R. I., was on the programme for last evening. An excellent counterfeit of the Syes of that Bank had been prepared, but luckily Deputy Superintendent Carpenter, in some one of those mysterious ways peculiar to police officers, got wind of it during the afternoon. He had all the Inspectors and Sergeants in command summoned, and ordered them, with the assistance of some of their more reliable men, to go around and warn the shopkeepers of their danger, and to request them if any of the bills were offered, to detain the person offering it and immediately to send for an officer. Three persons were to have been of service. The first arrest—and the only one of which we have as yet heard—was that of a man named Edward Pinkerton, who offered one of the bills at Thompson's Saloon, in Broadway. He was detained and an officer sent for. On searching him no other bad bills were found about him, and it is therefore supposed that he worked with a confederate who stayed outside and kept the bulldog of the forgery, while he tried the indoor experiment. Pinkerton, who declared that he thought the bill is change, on Tuesday night, was locked up.

The cattle markets were in short supply yesterday, the total City receipts of fresh Beeves having been only 2,700, against 4,381 the previous week, and 3,048 as a weekly average for 1856. The surplus from the last market day in part made up the deficiency so that prices did not fully recover the heavy decline of the previous market day. The advance, yesterday, averaged about 1 cent per pound, net weight. The receipts of sheep and lambs have been quite large, especially of the latter, numbering in all 18,886. There is, however, a free demand for mutton and no perceptible decline in good mutton stock.

Mrs. Cunningham is preparing her petition for an appeal from the Surrogate's decision to the General Term of the Supreme Court—for which she is allowed to Sept. 12. She complains that her confinement in the Tombs is wearing health away—that she begins to suffer from dropsy. Concerning her property, her fees to the lawyers, her hopes and so forth, as she freely confessed them yesterday, we give a detailed statement this morning. She does not shrink even from the thought of preparing an autobiography, at some future day, as a legacy to the world.

District-Attorney Hall has notified liquor dealers and others, on the Bulletin of the Court of General Sessions, that all cases of violations of the Sabbath, by selling liquors, &c., will be tried on the first Monday in September, save and except those that may elect to be tried at Special Sessions.

The Board of Health yesterday by resolution prescribed the duties of the Inspector of Vessels of this port. Henceforth the Inspector is bound to do the work—he cannot delegate his powers to a third party; his examination must be personal and absolute, or else he cannot collect his bills. This will be of interest to the many merchants who for years have disputed his bills heretofore, and probably reconcile them to his future bills for work actually done. The Board has long been earning this matter in debate, and for a while it was questionable how the difficulty would be settled. It is either unnecessary to have an Inspector of Vessels, or else it is important that he shall faithfully perform his work; and hence, while the statutes create the office, it is well that the Commissioners have so clearly defined his duties.

The body of a young married woman named Ellen Tillman was found yesterday floating in the water at the foot of Wall-street, East River. Deceased was lately employed in the laundry of Savery's Hotel, and was married to one of the workmen of that establishment only last Saturday week. On Sunday morning last she left her home in Madison street, and never returned again. She is supposed to have committed suicide for some reason unknown. An inquest was held upon the body, and a verdict of "Supposed Drowning" rendered. The body was not identified until after the inquest. Deceased was a native of Ireland and about 30 years age. Her maiden name was Cheadon.

It now comes out that not all those wounded in the great "Dead Rabbit" riot in the Sixth Ward last Fourth of July were mentioned at the time, even by the Times. Many of the maimed rioters were cunning enough to hide their shame and their wounds in St. Vincent's Hospital, corner of Eleventh-street and Seventh-avenue, where no one ever imagined to look for them.

The schooner *William Eddy*, now lying off the long dock at Jersey City, was entered by burglars between 2 and 3 o'clock yesterday morning, and robbed of $600 in gold. The burglars, after gaining the deck, proceeded cautiously to the cabin door, which they pryed open. They then applied a sponge saturated with chloroform to the nose of the Captain—J. Truman—whom they found sleeping in his berth, and threw him into a profound state of unconsciousness. They then proceeded coolly to ransack the cabin, and finally found stowed away at the foot of the Captain's berth two bags of gold, containing $600. The Captain was awakened just as the thieves were leaving. He gave them chase, but they had regained their boat before he reached the deck. He heard the splashing of their oars, and fired his revolver in the direction of the sound, for he was unable to distinguish them. He thinks he shot one of the party, for he heard one of them exclaim, "My God! Tom, I am killed!" They, however, plied their oars, and managed to escape under cover of the darkness.

Forty thousand cigars were seized by the Custom House officers on board the bark *Express*, at Quarantine on Tuesday, on charge of being smuggled.

The oystermen of Staten Island are letting the Seguine's Point buildings alone,—not being anxious by burning them down to tax their town with the whole cost of their unwelcome erection. They are now giving their attention to primary meetings, preparing by the ballot to carry their griefs to Albany.

An order of arrest against John Lawler and an attachment against his property were granted by Judge Peabody yesterday. Lawler is charged with embezzling the funds of the plaintiffs, (proprietors of the St. Nicholas Hotel,) and they will bring a civil suit to recover damages.

Mr. Hart, Naval Surveyor, has been on to Philadelphia, where he has made a seizure of some $5,000 worth of goods, which are alleged to have been fraudulently pushed through the Custom House here. Rich developments in the way of frauds upon the New-York Custom House are promised.

Mrs. Elizabeth Dribkwater, residing with her brother-in-law, Henry Ellis, Esq., No. 81 Hicks-street, Brooklyn, died yesterday morning from burns received by the explosion of a fluid lamp the night previous.

The United States sloop-of-war *Falmouth*, E. Fallard, Commander, from Rio on the 11th ult., has arrived in this port. Her officers are all reported well.

Thomas Sewell, Esq., a retired merchant of Baltimore, 68 years of Age, was killed yesterday, on the Hudson River Railroad, at Peekskill. He attempted to get upon the cars while they were in motion, and missed his footing and fell between them, the cars passing over his body.

A meeting of merchants was held at the Merchants' Exchange, yesterday afternoon, relative to the health of Brooklyn, L. I., when Prof. Forbes, Esq., delivered a brief exposition of the subject, and appropriate resolutions were adopted.

Capt. Hibbert, of the ship Harriet Hatch, from Para, Aug. 3, arrived yesterday, informs us that it was reported in Maranham, July 20, that the British Consul at Pernambuco had been assassinated in July.

A young man named Matthew Welch, was committed to the Tombs yesterday afternoon, charged with embezzling from his employers, D. Thomas & Co., dry goods dealers in Spring-street. He was arrested while attempting to sell a piece of silk to the keeper of a loan office in Fulton-street. About $300 worth of silk and other goods were found in his house.

John A. Kennedy, Esq., of Castle Garden, complains that the captain and officers of the steamship Washington suffered many of the second cabin and steerage passengers arriving with that vessel on the 24th instant to leave on the evening before her arrival at Castle Garden Emigrant Depôt.

The Fifteenth Ward Republican Association held a meeting last evening. The vacancies in the several Committees were filled as follows:

Delegates to 6th Ward Committee—Joseph Blunt and William H. Blakeman.

Delegates to Young Men's Committee—John Sedgwick and William H. Anthon.

Executive Ward Committee—Starkie Linsay and E. F. Hall.

The Association meet on the 8th of September to elect three delegates to the City Convention, which is to appoint Delegates to the Syracuse Convention.

The editor of an obscene newspaper, named Abernethy, was arrested yesterday.

A wealthy widow lady, Mrs. Wendell, residing in West Thirty-second-street, near the Fifth-avenue, was discovered dead in her bed yesterday morning.

A contribution of $492 has been raised by the German inhabitants of the City for the benefit and support of the widow and orphans of John Metzler, the German who was killed on the 12th ult., in the police riot in the Seventeenth Ward.

The St. Davis's Benevolent Society met yesterday, and passed resolutions honorable to the memory of the late Mr. Mortimer Livingston.

Doctor Cammar has resigned his position as assistant surgeon at Ward's Island.

Kansas and Governor Walker.

The great mass of the people of the United States have no desire to prolong the political disturbances in Kansas, either for the benefit of speculators in the Territory, or of partisan politicians in the States. They desire to see peace, order, and prosperity established in that fertile and attractive region; and this, they know, can never be accomplished so long as it is the arena on which the political parties of the Union fight their disturbing and embittered contests. Since the last Presidential election, the general feeling of the whole country has been that *the people* of Kansas should be left to manage their own affairs—that the admission or exclusion of Slavery from their limits should be submitted to their own decision, and that the *whole* people should be protected in the expression of their will upon it.

When Governor Walker went to Kansas, therefore, and declared his determination to secure this result, he was sustained and warmly applauded by the great mass of the people in all sections of the country. Ultraists and extremists of both North and South denounced him, for the evident reason that the success of his policy would deprive them of their main political stock in trade. But with the great body of the people—those who look to the triumph of principle, rather than the mere success of party—his promises and proclamations were received as calculated to settle upon a just, firm, and lasting basis, the political affairs of Kansas. If Governor Walker had gone boldly and firmly forward in the execution of these engagements,—paying no attention to the clamors of politicians or the hostility of sectionalists, he would have accomplished his object and have secured for himself and the Administration he served a marked degree of distinction and of popular favor. It is possible for him to do this yet. We, certainly, are not among those who would judge him rashly, or in advance of his action. We have no disposition to condemn or denounce his administration upon suspicion, or upon any other evidence than that of clear and unmistakable facts. But we are compelled to confess that events of recent occurrence have infused into the public mind a decided distrust, either of the uprightness and integrity of his intentions, or of his ability to withstand the adverse influences which are brought to bear upon him.

We have already referred to some of these occurrences. It is certainly a circumstance well calculated to inspire distrust, that, while the Administration professes a desire to conciliate the mass of the people, all its appointments to office should have been made from the *clique* of ultraists who have been mainly instrumental in promoting the disturbances which have been so rife. For this, if Gov. Walker is not responsible, President Buchanan is. The action of the Grand Juries, moreover, in renewing the persecution under legal forms of the Free-State men;—the promulgation of extrajudicial edicts by members of the Judiciary;—and the efforts made in various quarters to embarrass the free action of the people, all indicate a renewal of a crusade against that portion of the inhabitants who are in favor of making Kansas a Free State. And yet it would be evidently unfair to hold Governor Walker responsible for all these movements, as many of them occur in quarters over which he has no control, and some of them are directly opposed to his known wishes and endeavors. Our Kansas Correspondent writes, for example, that Governor Walker condemns and denounces Judge Cato's declaration that none can vote at the October election except those who shall have paid the Territorial *tax*—and that he is determined the *bona fide* inhabitants of Kansas *shall* vote, if they desire it, and shall be protected in voting, whether they have paid the Territorial tax or not. For many of these instances of misconduct President Buchanan is much more directly and culpably responsible than Governor Walker, for he has the power to prevent and suppress them,—and yet neglects to use it.

But there is one point in the proceedings of Gov. Walker for which we have seen as yet no satisfactory explanation,—we mean the apparent abandonment of his original ground, which was that, upon the submission of the Constitution to the people in October, all who should then be actual, bona fide residents should have an opportunity to vote upon it. This was so plain, fair, and so clearly in accordance with justice, that it is that been fully and frankly avowed time to time, the whole country would have been compelled to support it. It was unhesitatingly attacked by the advocates of the Slave Power, on the ground that it would admit abolitionists, and by them of the North on the ground that it would admit pro-Slavery Missourians—who should come into the Territory solely and exclusively for the purpose of voting. This simultaneous assault from opposite sections and for opposite reasons, was the best possible evidence of the soundness of his position. Yet we now observe, with great regret, that Gov. Walker is modifying his views upon this point, and virtually abandoning the position he then assumed. Our Correspondent, writing professedly in his vindication, says that the Governor is now in favor of admitting all to vote in October *who were residents of the Territory on the first of April last*. In other words, Gov. Walker is now disposed to require *a probationary residence of six months* as a condition of voting upon the adoption of the Constitution. This is not the ground he took in his Inaugural address, or in his Topeka speech of the 9th of June. In the first he said that the Slave Constitution was *to be submitted "for ratification or rejection by a majority of the then actual, bona fide residents of Kansas."* And in the latter he thus stated still more distinctly his views upon the subject:

"My doctrine is this, that in the future, when the Constitution shall be submitted to the vote of the citizens of Kansas, that it shall be submitted to the vote of the whole people. I do not mean those who are now registered under the territorial law. I do not mean those who were residing here on the 15th of March last, but I mean the whole people of Kansas, not only those who are here now but those who will be here next Fall and actual residents—that they—the people over whom these institutions are to operate—that they, by a majority of their votes, shall decide for themselves what shall be their constitution and what shall be their social institutions."

Nothing can be more explicit, more just or more acceptable to the country than this. What, then, we feel justified in asking, can have prompted the Governor to an abandonment of this position, and the adoption of one so widely different as that which he is now understood to hold?

The Financial Panic.

It is with sincere satisfaction that we find in the columns of the New-York *Tribune* the following short and sensible statement which we cordially echo and indorse:

"It is absolutely necessary that men and institutions which have means and influence should exert themselves in calming the public mind; in checking the progress of the present crisis, and in restoring as much as possible, public confidence in the general soundness of the country."

It is absolutely necessary that "men and institutions which have means and influence" should do just this thing—and the advice is so good that it is hardly worth while for us to quarrel with the quarter from which it comes. We have never been able to see the wisdom of wasting in querulous investigation of the causes of disease, that precious time which should be devoted to its cure. If a man has a cold in his head it doesn't seem to us particularly important to settle the question of where and how the trouble was contracted, whether "by the wetting of his feet," or by "sitting in a draught," until he is safely rid of the catarrhal nuisance.

By what means, however, we have been brought into our present dilemma, few people who have observed the recent course of certain journals in this City can doubt. For our present dilemma is not a difficulty—but a panic. It is not a serious interruption of the ordinary channel of prosperous enterprise, but a threatened stampede of terrified stockholders, operators and directors. In a word, it is a metaphysical and not a material disaster which has overtaken the commercial world—literally, again, a panic. Now a panic, as every body knows, is such a perturbation of human reason and common sense as may be produced by the mysterious sounds and sights of a forest at midnight upon the mind of a man who has lost his way—such a perturbation as the heathen Greeks, when they felt it, used to attribute to the secret influences of Pan, the forest god acting as his own scare-crow to frighten off the mortal intruder upon his sacred demesnes. The part of Pan has been pretty well played in Wall-street, and our cotemporary of the *Tribune* has contributed his full share to the moanings and mutterings and ominous inarticulate murmurs of which we are now beholding the legitimate fruits.

By all means, therefore, let the *Tribune* now set about works meet for repentance, and help us as far as it can to undo the mischief which it has been so busy in doing. "The public confidence in the general soundness of the country must be restored." Certainly,—and nothing can be more easy than to restore it. For the "general soundness of the country" only asks for a hearing. It is its own abundantly able orator and advocate. To infer from the failure of one powerful and respectable financial concern, of which failure the causes are still under examination, or from a dozen failures thereupon following, that the whole country is on the verge of bankruptcy, and to publish that inference far and wide through the land with all the ululations of Cassandra, is to do a very nonsensical as well as a very wicked thing. For when the alarmed alarmists of the present moment shall wake up to find themselves more scared than hurt, "kilt intirely" rather than killed, it is just possible that they may cherish unamiable feelings towards the false prophets whose cries betrayed them out of their wonted self-possession. Let the "men and institutions" which have "means and influence" immediately set about their patriotic task. Let the *Tribune* itself, for instance, which possesses a certain measure of means, and a certain proportion of influence, begin to compel the attention of its reader to the actual facts of our present financial condition; let it repeat and reiterate its own perfectly accurate statement that, "The country at large is rich and prosperous; the crop of breadstuffs the largest ever known, while the cotton crop will sell at very high prices." For it strikes us that by so doing the *Tribune* will more efficiently contribute to that pacification of the public fears which it professes to desire, than by "improving" the failure of the "Ohio Life and Trust Company" to a new sermon of "excessive imports and deficient exports" with the pleasing and comfortable moral that "there is no bottom to anything"—"and that bankruptcy is our only remedy."

Upon the consistency of such sermons with the sensible purpose so recently published by our contemporary, it is not necessary for us now to inquire. The [illegible] a crisis of public importance, and all can hope [illegible] of his own accord, [illegible] time to change away on [illegible] view from the [illegible] world shall have settled itself peacefully to work again, *our neighbors of the Tribune may* [illegible] fact of national exchanges will less inconvenience to the community at large, and doubtless with just as much profit to their own particular friends and acquaintances.

Hitchcy to the Atlantic Telegraph—The Cable Broken.

The steamer *America*, at Halifax yesterday, reported that the first attempt to lay the Telegraphic Cable across the Atlantic had *failed*. The cable on board the *Niagara parted at a distance of 335 miles from the Irish coast*, and the vessels had returned. A meeting of the Directors was to be held on the 18th, to decide whether they should renew the attempt or abandon the enterprise. There can be no doubt as to the decision that will be reached. There are still over 2,000 miles of the cable remaining—at least 200 more than would be absolutely necessary—and, unless the accident was of such a nature as to prevent the hope of better success in another attempt, there can be little doubt that the vessels would immediately start again upon their westward voyage.

It is not easy, however, to form a decisive judgment upon this point until we have more accurate information as to the causes and circumstances of the accident. It is stated that the Cable parted in consequence of an attempt to check too suddenly its departure from the ship. If this was so, all that will be needed will be greater care in a renewal of the attempt. The accident at the outset, when the Cable broke before the vessels had left Valentia Bay, should have put them on their guard against a recurrence of such a disaster.

But it is not to be presumed for a moment that so vast an undertaking as this,—in which so much capital and so many important interests are involved, will be abandoned in consequence of a single mishap of this character. It is barely possible that, on account of the advanced stage of the season, it may be thought desirable to postpone until next year the renewal of the attempt, and to provide meantime still more perfectly against a recurrence of accidents. But we are inclined to believe that even this temporary delay will not take place. The fact that the ships are now all together,—that a full force for the work is at hand,—that it would be very difficult, if not impossible, to command equal facilities for the same work next year, will induce the Directors to renew the undertaking with the means at their command and push it forward, if possible, this year to its completion.

We are inclined to believe, therefore, that the next steamer will bring intelligence that the telegraphic fleet has again taken its departure, or at all events that steps were instantly taken to renew the endeavor which proved at first so unsuccessful. The accident will undoubtedly be a very heavy blow and great discouragement not only to those gentlemen who have embarked large amounts of capital in the enterprise, but also to the thousands and tens of thousands, throughout the civilized world, who have watched its progress thus far with high and confident expectations of success. Their first impression will be that the whole scheme is a failure and must be abandoned. But a little reflection will suffice to convince them that the accident is by no means so serious as this, that the attempt is quite certain to be renewed, and that half a dozen such mishaps would not lead to its abandonment.

More Gamblers Arrested.

There was another *crash* in Wall-street yesterday. Jacob Little failed again, and his example was imitated by several others. They were all, however, of the fraternity of Stock-Gamblers, and failed mainly because they found it more convenient to do so than to pay their losses or fulfil their contracts. These contracts were for the delivery of Stocks on time, and as they are not recognized in law it is for those who make them to fulfil them or not just at they may see fit. These debts are, like those of other gamblers, debts of honor;—and it is getting quite fashionable among our Stock Exchange speculators to consider the *loser* involved merely a matter of convenience. Jacob Little failed this time, it is understood, because his operations for the last few weeks have been too successful. He had sold stocks of all sorts at rates far below the market price;—but they went so much *lower* that when the time to deliver them came nobody who had them would sell,—he could not procure them for the fulfillment of his contracts, and of course he had to *fail*.

Every new failure is naturally made the occasion for new alarms;—but we believe the general impression among the sound business men of the City is, that every *such* failure is a positive advantage, and that nothing better could happen for the country than the failure and utter extinction of the whole nest of stock gamblers and the purification of Wall-street from their presence. They are of no service whatever to legitimate business at any time,—their gambling operations tending only to the unsettling of real values and the creation of fictitious standards. By their skillful and unprincipled combinations they depress or inflate the prices of all stocks and make innocent holders the victims of their schemes,—gambling not with their own money, nor inflicting losses only upon each other, but making the widow and the orphan involuntary sharers in their game, and robbing them remorselessly of their invested earnings. And they are constantly heavy borrowers at the banks, which loan them the money needed in legitimate and healthy business, and thus cripple all the sound operations of regular trade, for the promotion of these reckless and ruinous schemes. Their failure, though it may embarrass their brethren, is a relief to the market;—and if it could only be made general and permanent, the business of the City would be largely profited thereby. But a failure is purely a matter of convenience with them; it is never very lasting. Being under no legal obligations to comply with their engagements, they have generally little difficulty in effecting a "settlement" with their creditors,—and then the Stock Exchange, which gives them facilities and opportunities for the prosecution of their schemes, opens to them its doors and admits them anew to its sacred bowers.

This has been the course of things for a long time [illegible]

LATEST [illegible]

By Telegraph to the N. Y. Daily Times.

[illegible]

[illegible] NEW STEAM [illegible] ARRIVING, &c.

WASHINGTON, Wednesday, Aug. 26.

Lieutenant-General Scott has arrived here, in response to a telegraphic dispatch sent him. He will be in consultation with the Secretary of War in relation to politely entertained in Kansas and Utah.

The Secretary of the Navy has appointed, on a board to examine and report on the models of the Navy for the cost of construct a new dover [illegible] Commodore STEWART, Captain [illegible], Commodore HARTSTENE; Naval Constructors, Messrs. LENTHALL and HAND, and Chief Engineer [illegible] to be Navy.

Information [illegible] from the special agent of the Indian Bureau, that the annuities due the Sioux Indians, Minnesota, can now be properly paid, [illegible] for that purpose have been dispatched by the acting Commissioner of Indian Affairs.

J. B. DAUPHINE, of Illinois, has been appointed Purser in the Navy, vice DUNCAN, resigned.

Post-Office papers of the 17th inst. are to hand.

The Cotton receipts from Red River are very [illegible] in twenty days later than usual.

The Mission of San Antonio, Texas, were picketing at the date of the latter, Texas.

[illegible] the Mail [illegible] Texas.

We have made 1% cotton in the line of July, but the [illegible].

[illegible] Convention.

The Republican Convention met, here yesterday, and temporarily organized by choosing Dr. BRADLEY of Indiana, Chairman, and Mr. BRADLEY of Illinois, Secretary, after arranging for the permanent and usual Committees, the Convention adjourned until this morning. The attendance was very large.

SECOND DAY.

Delegates from nearly all the Free States and from [illegible] and Kansas were present.

Rev. Mason STORRS, D. D., of Massachusetts, was chosen President; Rev. Mr. RANKIN, of Ohio; Hon. J. B. Williams, Rev. Mr. Monroe, of Michigan; J. A. Cody, of Kansas; Simon Sever, of Illinois, and Alfred Brady, of Indiana, Vice Presidents; Dr. T. B. Ellis, of Indiana; Rev. Mr. Denison, of New-York, and J. T. Bailey, of Ohio, Secretaries.

Letters supporting the objects of the Convention were read from Rev. Dr. Nott, President R. Sullivan, of Yale College; Rev. Dr. Cheever, of Granville, Ohio; Hon. E. Fairchild, Ex-Governor of Wisconsin, and many others.

The Business Committee was then appointed: R. Burnett, Connecticut; Rev. Mr. Denison, New-York; W. C. Monroe, Michigan; E. S. Stimson, Missouri; J. B. Williams, New-York; J. F. Kenny, Ohio; Hon. J. A. Foot, Hon. D. K. Carter, Rev. Dr. Bailey, Rev. Mr. Boardman, Rev. Mr. Garrett, and others.

The objects of the Convention were then stated by R. Burnett, Rev. Mr. Denison, and others.

The conference was numerous, and the proceedings were taken upon with considerable interest.

Resolutions were introduced and speeches made by Messrs. Burnett, Sever, Denison, and others.

Times of conscription and compensation were introduced by the Business Committee and discussed.

Two of the leading ideas were, the appropriation of the public lands and the Customs revenue, beyond the expenses of the Government, to the purposes of compensation. Other ideas were also introduced, and should be debated by this body.

From Kansas.

BANK CONVERSIONS—THE REPORTED BANK FAILURES AND THE BOSTON MONEY MARKET, ETC.

BOSTON, Wednesday, Aug. 26.

Some one hundred Kansas, representing nearly all the New England Relief, met here to-day to take preliminary measures for a Bank of mutual redemption, to take the place of the Suffolk Bank redemption system. Mr. RAYNE of the Western Bank, presided. It was considered that the half million of dollars capital required by the charter had been nearly all subscribed. A Committee was appointed to select a Board of Directors, and indications are that the new Bank will be early on into operation.

The rumored Bank failures caused some talk in Change to-day, though but little credence was given the reports. The Hancock Bank of Ellsworth, Me., is in good standing, and its bills are promptly redeemed. The Worcester, Putnam and Rhode Island Central Banks do not redeem their bills at the Suffolk Bank, but nothing is known here of their reported failure.

At the auction sale of Stocks by STEARNS BROWN & SONS to-day, shares of the Boston Banks offered, realized from one to 11 per cent. advance, and other securities offered on equally firm position.

The Rockland Bank, of Maine, has not failed and its bills are being redeemed at the Suffolk, in this city.

From St. Louis.

LATER FROM SANTA FE—ACQUITTAL OF GOVERNOR MEDILL, ETC.

ST. LOUIS, Wednesday, Aug. 26.

The Santa Fe mail, so late as due, has arrived here, but it brings no news of importance.

The contest between the candidates for Congress was violent and exciting.

The mail party met Col. SUMNER at Fort Atchison on road for Bent's Fort. A few days previous to this Col. SUMNER was attacked by 400 of the Cheyennes, Col. S. routed and killed nine of them, destroying their property and taking their animals.

Gov. SHANNON, of Kansas, has been tried and acquitted.

Sailing of the Asiatic for Boston.

HALIFAX, Wednesday, Aug. 26.

The Royal Mail steamship Asiatic sailed from here at 6½ o'clock this morning, for Boston, where she will be due between 4 and 5 o'clock to-morrow afternoon. Weather calm and clear.

Business Affairs in Cincinnati.

CINCINNATI, Wednesday, Aug. 26.

Banking business were comparatively quiet here to-day, though Third-street was quite as crowded as yesterday. None of the State Banks are discredited yet. The bankers have agreed not to sort or return the notes of country banks for thirty days. There has been no run on any house here either yesterday or to-day. Notes of the Kanawha Bank sell at fifty per cent. discount.

[illegible] Bank Failure in Hartford.

HARTFORD, Conn., Wednesday, Aug. 26.

The public may rest assured that every Hartford Bank is perfectly secured; all rumors to the contrary notwithstanding. The stock of every one of the Banks is above par to-day.

Departure of the Canada.

BOSTON, Wednesday, Aug. 26.

The Royal Mail steamship Canada sailed to-day at one o'clock, with 49 passengers for Liverpool and 12 for Halifax, and $[illegible] in specie.

The Travel of the New-Haven Railroad.

NEW-YORK, Tuesday, Aug. 25, 1857.

To the Editor of the New-York Daily Times:

The unsatisfactory way of checking the compassion of railroad companies seems to be through the public press. Appeals to directors, &c., for abatement of nuisances and protection of passengers, are of no avail.

Your correspondent had occasion to walk over a portion of the track of the New-York and New-Haven Railroad, between Rye and Mamaroneck, and was greatly surprised and alarmed at the deplorable condition, although a Committee of the Directors had walked over the whole track and pronounced it in good repair.

Many of the sleepers were unsound, easily giving way to a slight blow; the spikes which hold the rails secure (if more half drawn out, and not occasionally an entire one wanting). Let the traveling community look out for an accident, and let the Company provide a better [illegible] than Mamaroneck. In this, at least, they [illegible] a guarantee for the security of the [illegible] entrusted to them by the public.

[illegible] be an exception, in the end for [illegible] to have state meet in [illegible] to [illegible] of the [illegible] of the [illegible] Let the Company, then, regard this [illegible] as an [illegible] their duty [illegible] A CONSTANT [illegible]

QUARANTINE MATTERS.

Whereupon Board of Aldermen, the Commissioners Report on their Power—Resolutions Adopted—Stormy Interest Politics—Quarantine Commissioners.

For three days past very few vessels have arrived at Quarantine, from infected ports. There are now but three lying at the lower anchorage, and but twenty-five at the upper; the most of which are already cleared for ventilation, fumigation, cleansing, &c. There are now no cases of yellow fever in the Marine Hospital, and but very few of any other disease, except small-pox. And even the number of cases of small-pox are far less than three weeks ago.

The present flattering sanitary condition of the Marine Hospital is a great comfort to the people of Staten Island, and the mass of the citizens seem indifferent to the present "stand-still" in relation to the removal of Quarantine. But the wide-awake few, the property owners, are not to be thus lulled into quietude. They desire, above all things, that Quarantine shall be sent off the island; and not a few of them are indignant at the Quarantine Commissioners, that they did not declare Seguine's Point a site for a permanent Quarantine, at the onset of their operations.

Staten Islanders feel variously towards the Commissioners of Emigration. Those who live on the west and north shore are rejoicing that they did not accept the "temporary accommodations;" while those on the east shore, in the neighborhood of Stapleton, Clifton, and Tompkinsville, are exceedingly wroth that the Point was declared defective for hospital purposes. The fear is expressed, and is generally prevalent, that unless Sandy Hook is obtained for a Quarantine site, the institution will be very likely to remain where it now is.

The new project of building a dock or making land on the "Old Orchard Shoals," is spoken of as chimerical, and is regarded as a proposition made to appease the wrath of those who are anything but pleased with the course pursued by the Quarantine Commissioners. Staten Islander treats it as a HOAX, and anything but a successful one.

"Orchard Shoals" lies some four or five miles from Seguine's Point, about as many miles from the ship channel, and is exposed to the swells of the ocean, almost as much as if it were located outside of Sandy Hook; and besides, the water covering the shoals is entirely too shallow to allow vessels drawing any considerable water to approach near them. These facts seem to render the proposition to make land on "Orchard Shoals" for Quarantine purposes quite impracticable at least, unless a much larger sum of money is talked about than the State is likely very soon to appropriate for Quarantine purposes.

Since the Emigrant Commissioners refused to erect additional buildings at Seguine's Point, it is said that the people on the west side of the island have deferred to meddle with the "temporary hospitals," and that they have had several private consultations as to the best method to induce the State to direct that no part of Quarantine be placed upon the island. The malcontents (that were) are organizing already for the Fall election. They are reported as determined to run an independent ticket on the Quarantine issue, and as having already communed with the citizens of the District, as to a proper candidate for State Senator, Member of Assembly, &c., &c. The organization, it is said, will be independent of all parties; but it will be sustained by the long purses of the more wealthy oystermen; and that the hat has already been passed around to raise stuff, out of which are compacted the sinews of war. It is predicted that this move of the oystermen will make a "three-cornered fight" at the next election in Richmond, which will render the result doubtful as to the election of county officers.

On the afternoon of the 25th inst., considerable excitement was created at Tompkinsville by a Custom-House seizure of about 40,000 cigars, on board of the bark *Express* from Havana. The charge upon which the seizure was based, was that of smuggling, claimed to be proved by the fact that the 40,000 cigars were nowhere to be found recorded on the manifest. The cigars are now stored in the Government Warehouses at Quarantine, and the parties accused of smuggling have been proceeded against according to law.

Commissioners of Health—Nuisances—Inspection of Vessels.

At a meeting of the Commissioners of Health, held at the City Library Room, yesterday, (Wednesday,) at 12½ o'clock: Present, President PHILLIPS and CLANCY, Commissioners MILLER, THOMPSON, MORTON and ROSEWELL; WALTER P. CORNELIN, Clerk. The following business was transacted:

COMMUNICATION FROM THE CITY INSPECTOR.

CITY INSPECTOR'S DEPARTMENT, NEW-YORK, Aug. 26, 1857.

To the Commissioners of Health:

GENTLEMEN: In relation to the complaint made of a nuisance existing in Madison-street, between Pearl and Roosevelt streets, I would respectfully report: That from the broken and unpaved condition of Madison-street, as above, the water lies thereon and creates a highly dangerous nuisance, to which I deemed it my duty to call the attention of the Common Council in a communication addressed to the Board of Aldermen some months since. Upon examination, the Committee to whom the subject was referred did not sustain the assertion of an alleged nuisance, and hence no action has been had; while my opinion of the evil existing remains unchanged.

Recent examination proves the street to be in a very bad condition, and requires that a drainage shall be effected by paving or building a culvert so as to cause the water to flow off the same freely. This work belongs to the Croton Aqueduct Department, to perform, and the following resolution is therefore respectfully submitted:

Resolved; That the Commissioners of Health would respectfully ask the Croton Aqueduct Department to cause the carriage-way of Madison-street, from Chestnut to Roosevelt streets, to be paved; and that Chestnut-street, from Madison-street to the New Bowery, be placed in good and proper condition, the repairs on both the above mentioned streets to be made in such manner as to cause the water to flow from the surface of said carriage-way, to the proper culvert or sewer, connecting in such manner as to effect the abatement of the present existing nuisance—the work to be executed without delay.

Respectfully, GEO. W. MORTON, City Inspector.

On motion, the resolution was adopted.

INSPECTOR OF VESSELS.

The next business taken up by the Board was that of designating the duties of Inspector of Vessels. This was a matter which had been before the Board for the past two weeks, and it was found rather difficult to dispose of it satisfactorily to the Inspector, the shipowners, or the Board.

It appeared that soon after Mr. DUFFY entered upon the duties of his office, and began to collect his bills, the shipping men began to find fault and refused to pay. Mr. DUFFY continued to present bills, but the merchants still refused to pay, saying that he (DUFFY) had no authority to make inspections, and that they were under no obligation to pay.

The antagonizing parties, after awhile, not relishing the collision which existed between them, appealed to the Commissioners of Health for relief: Mr. DUFFY asking, on the one hand, to have his duties prescribed, and the merchants, on the other hand, complaining that they were and had been imposed upon by the Inspector of Vessels. The communications referred to are as follows:

To the Honorable Commissioners of Health:

GENTLEMEN: In the discharge of my duties as Inspector of Vessels, it is necessary that I should have some authority from your Board to enable me to fully carry out the provisions of law.

I would respectfully suggest that a certificate, signed by the Board, be allowed me for that purpose.

Very respectfully, your obedient servant, PETER DUFFY, Inspector of Vessels.

NEW-YORK, Aug. 4, 1857.

To the Commissioners of Health of the City of New-York:

GENTLEMEN: The undersigned, shipowners of this port, beg leave to ask your attention to the fact that they are called upon to pay, and in many instances have paid, to Mr. PETER DUFFY, Inspector of Vessels, for examination and inspection of vessels and cargo under the direction of the Mayor and Commissioners of Health, a fee of $2 per vessel; and to inquire if such action upon his part has the authority and sanction of your honorable body, according to the requirements of the law.

We admit the propriety of strict regulations to insure the health of our City, and we would not heedlessly interfere with those that you may deem necessary, but in this case, we believe the act is performed (or pretended to be done, for it is doubtful if the examinations are actually made) without your authority, and, in a majority of cases, upon vessels that have already been thoroughly tested by the Health Officer of the Port at Quarantine.

The tax is not small, but, if illegally exacted, we are not willing to submit to it, and ask your honorable body to take such action as will inform us whether it is to be paid.

Respectfully, your obedient servants,

N. M. PERSHWAY & CO.,
JAMES W. ELLIS & CO.,
WM. F. STANTON,
HAGUE & HAZARD,
BERRY, SON & CO.,
McCready, Hoyt & Co.,
RICHARD P. DUNN & CO.,
NESMITH & SONS.

NEW-YORK, Aug. 19, 1857.

The above communications were referred to a committee, composed of the Mayor, Mr. Roosevelt, and Dr. Thompson. His Honor, the Mayor, not being in the City, no action was had in relation to them until yesterday, when the Committee reported unanimously the following resolution, which was adopted, viz:

Resolved, That the Inspector of vessels be and is hereby directed to personally inspect every vessel the cargo of which shall consist in whole or in part of wool, hemp, rags, hides, skins, hones or horns, arriving in the port between the 1st day of April and the 1st day of November in each year; and also all cargoes of foreign goods or merchandise on board of any consulate vessel not subject to Quarantine inspection, arriving in this port during the same period.

Resolved, That he be and is hereby required to report to this Board daily the condition of every vessel and cargo so inspected by him since his last report.

The above resolutions were adopted by the Board, and sent to his Honor the Mayor for approval.

On motion, adjourned.

A LETTER FROM IRVING SEVER BEFORE PUBLISHER.—The distinguished Mr. CUNNINGHAM says there are two sides to every story—and so thinks JIM IRVING—alias Ex-Superintendent JAMES IRVING, Esq. The following is his version of his brutal assault upon Officer SAMUS, in Broadway, on Tuesday:

To the Editor of the New-York Daily Times:

Your paper of this date contains an article in reference to an occurrence which took place between a person called GEORGE SAMUS and myself, which does me great injustice, and I am satisfied when you know the facts that you will justify me.

Some time since while in the discharge of my official duties, I was beset by fifteen or twenty persons who threatened to take my life, the leader of whom was GEORGE SAMUS. I took no notice of them or him.

Yesterday, while walking up Broadway, in conversation with a friend, no one else being with me at the time, a person put out his foot and nearly tripped me down. I turned and for the first time saw said SAMUS and asked him what he wanted. He immediately seized me by the throat and said "What do you want you s—n of a b—h." I then took hold of him and struck him two or three times and was going on, when he again rushed at me and seized hold of me. I then threw him on the pavement in the street and left him taking no further notice of him. I did not know that he was a policeman; he had no uniform on and I supposed he was merely following out the promptings of his nature and attempting to insult and degrade me, because I treated him with the contempt he deserved, and would not place myself on a par with him.

I have made charges against him before the Police Commissioners, and in a few days the facts will be published, and then the public and yourself will perceive that great injustice has been done me, and that I have done only what any man would have done on being assaulted and insulted by a ruffian.

Yours respectfully, JAMES IRVING.

NEW-YORK, Aug. 26, 1857.

IRVING was arrested yesterday on the charge, by Officer KING, of the Lower Police Court, and taken before Justice OSBORNE, who held him to bail in $500, to answer before the Court of General Sessions.

List of Encampments this Season.

ENCAMPMENTS THAT HAVE TAKEN PLACE.

26th Regiment, Col. S. YATES, at Gloversville, Fulton County, on the 10th of August. A review was had by the Governor on the 19th, accompanied by the Adjutant-General, Inspector General and other members of his staff.

54th Regiment, Col. H. S. FAIRCHILD, at Geneva, on the 17th August.

ENCAMPMENTS TO TAKE PLACE.

81st Brigade, comprising the 65th, 66th and 74th Regiments, under the command of Brigadier-General G. A. SCROGGS, at Buffalo, on the 24th August; on the 26th will be reviewed by the Governor and full staff. A sham battle will take place during the week.

15th Brigade, comprising the 33d and 34th Regiments, under the command of Gen. S. F. JUDD, at Norfolk, St. Lawrence County, on the 31st August.

23d Brigade, comprising the 47th and 48th Regiments, under the command of Gen. R. H. TYLER, at Oswego, on the 31st August.

81st Regiment, Col. J. L. MESELAN, at Westport, on the 31st August.

19th Regiment, Col. P. R. JASTRAM, at Riverhead, L. I., on the 1st September.

8th Brigade comprising 20th and 21st Regiments, under command of Brigadier General H. A. BARNUM, at Poughkeepsie, on the 1st September. The Governor will review at this encampment on the 3d September.

83d Regiment, Col. HORACE NELSON, at Plattsburgh, on 7th September.

60th Regiment, Col. R. B. VAN VALKENBURGH, at Corning, on 8th September.

During the month of October an encampment will be held at Auburn, under the auspices of the Military Association of the State, to be designated "A Camp of Instruction," on which occasion military companies from all parts of the State will contest for prizes.

THE EMIGRATION COMMISSION.—Castle Garden presented an animated scene on Tuesday morning. The steamship *City of Washington*, from Liverpool, arrived late the previous evening with 199 cabin passengers, and 454 in the second cabin and steerage, chiefly from England and Germany. Together with the first cabin passengers, a number of the second cabin passengers were permitted by the Captain and his officers to leave the ship the previous night. This was in contravention of all law. The Commissioners could not remove the passengers and their baggage after sundown; the consequence is, that those who were permitted so to leave after nightfall, and violate the rule, left their luggage, which was not landed next morning with that of the remaining passengers, and at expense, uncertainty and trouble, they will have to obtain it from the ship when moored at her dock. Besides which, the Captain will be liable to a fine of $50 for every passenger so permitted to land without the authority of the Commissioners. The affidavits of several of these passengers are in the hands of the Commission, and it is believed that they will deem it necessary strictly to enforce the full penalty.

In reference to the girls who complain that they were violated on board the *Cambria*, Captain PERRY, we have ascertained that Captain PERRY has paid the fine for their detention on board, and that as to MARY JANE REEVE, whose expectation and demand was that the second mate should marry her, some arrangement is said to have been made whereby she will be sent back to England. Whether she is gone or no is uncertain. Of the other two girls, nothing is known what has become of them.

The Commissioners appear determined to break the back of this horrible and increasing evil if possible, and express an opinion and hope that the publication of the names of such commanders as either connive at or participate in such atrocities, will have a tendency to weed them out from the national service.

As an illustration of the difficulties which beset and complicate the duties of the authorities at Castle Garden, we may furnish an amusing illustration: An honest Hibernian, writing from Monroe, Wis., legibly directs his letter thus: "Mr. B WALCOTT, Emigration Government Board, No. 8 Park street, Westminster, New-York." He desires Mr. WALCOTT, in London, to let him know when his brother in Tralee will arrive in New-York, what the fare will be from New-York to Janesville, Wis., and then he will forward the money. The letter gets into the hand of Mr. KENNEDY, the Emigration Superintendent, the vessel respecting which Mr. WALCOTT, in London, is asked for information, having sailed from Tralee long before he could possibly have received the letter even had it gone direct to its destination. Mr. KENNEDY will doubtless make matters all right in some way or other.

A busy time is expected shortly. Owing to the calm weather and light winds, no fewer than 47 vessels from Europe, which left eastern ports 30 days ago, are hourly expected.

AFFAIRS AT THE NAVY YARD.—There is considerable work now going on at the Brooklyn Navy Yard and quite a number of vessels are undergoing repairs. The old Frigate *Savannah* is in the Dry Dock and is being raised down to her copper. The old timbers are most of them sound, but the model is of the most clumsy description—a regular old tub. There are about thirteen hundred men employed about the yard in various departments. There are no new vessels on the stocks and no signs of preparation thereupon. The steam saw-mill was employed in cutting and preparing ship timber and plank and Col. HAMILTON's ingenious apparatus for sawing curved and crooked surfaces was at work. The mill stands by the side of the water at the upper side of the yard, and is a solid structure of brick two stories in height.

The Preble and Sebago are moored and lay near the mill, the latter vessel having never yet been fitted for sea.

The Missouri Election Still Doubtful.

The St. Louis Republican of the 24th says: "No returns have been received since our previous issue's paper, and we therefore shall use table, the last based from, with the exception above noted, the vote stands: For Rollins, 17,119; for Brown, 17,000. Brown's majority, 119. The official vote of St. Louis, however, will be full to-morrow, when Brown and Rollins are expected to come in."

LONG ISLAND.

The Brooklyn Water-Works—Letter to the Engineer.

NEW-YORK, Wednesday, Aug. 26, 1857.

To the Editor of the New-York Daily Times:

DEAR SIR: In your report yesterday concerning Mr. [illegible] in regard to the imperfections in the pressure pipe of the Brooklyn Water Works, you state that "the Engineer has recently made the discovery, &c."

Without explanation the natural inference from your remarks would be that the engineer had discovered an error in his own plans.

It is but justice to one of the most thoroughly competent and careful engineers in this country to state that the grades and details of the plan of the work were not made by him.

The contract was made originally by Messrs. Williams & Co., with the Nassau Water Company. It was afterwards taken with whatever imperfections it may have (if indeed there be any radical defects) by the citizens of Brooklyn, and Mr. KIRKWOOD was then first employed as engineer to see to its proper execution. In doing this he had to take it as it stood, trusting to the good sense and fairness of both parties to insure the adoption of such modifications as a close examination of the ground and developments in the progress of the work, might prove to be consistent with true economy. Such modifications are moreover provided for by the terms of the contract as originally made and as it now stands.

The contract is believed generally to be a good one, and under it the citizens of Brooklyn can have constructed an efficient and economical work.

It is the part, however, of common sense and strict honesty, that whenever any real and judicious improvement can be made in a work it should be effected, even if it be not in the original plan.

In this view, as well as in every other one connected with his profession, the citizens of Brooklyn could not be in safer hands than those of Mr. KIRKWOOD.

Will you do me the favor to give this an insertion, I am, with much respect, your obedient servant,

A. W. CRAVEN.

FATAL ACCIDENT.—A man, named JACOB OSWOLD, fell, in a stable at No. 283 Columbia-street, Brooklyn, yesterday morning, and died a few hours afterwards. Coroner REDDING held an inquest.

FOUND DROWNED.—Yesterday morning the body of an unknown man was taken out of the water at the foot of Jorolemon street, Brooklyn. The body was dressed in satinet pants, checked shirt, plaid vest, and wore heavy red whiskers and moustaches. In one pocket was found a receipt for four pounds, signed by JACOB WILSON, keeper of a shipping office.

SERIOUS ACCIDENT TO A PRIVATE WATCHMAN.—JOHN WOLTERMAN, employed as a watchman on board a vessel lying at the foot of North Seventh-street, Brooklyn, on Monday night last, at about 9 o'clock, fell into the hold, where he remained undiscovered until the following morning. His injuries are of a serious nature. He was taken to his residence, No. 116 Essex-street, New-York.

MORTALITY IN BROOKLYN.—During the week ending Saturday last, there were 198 deaths in Brooklyn. Sixty of this number were under one year, and 46 under 50 years of age. Consumption claimed 18 victims.

Mobbing the Presiding Elder of the Eastern District, Philadelphia Conference.

Correspondence of the Philadelphia Evening Bulletin.

NEW-CASTLE, Monday, Aug. 24.

At the close of the camp-meeting for Greensboro Circuit, Caroline County, Md., held at Bozansboro, and which closed a few days ago, there was witnessed one of the greatest Pro-Slavery outrages which has ever occurred in the State of Maryland. At many meetings of this kind it is usual at the close of camp-meeting, for all members of the Church (Methodist Episcopal) to march around the ground, inside of the circle formed by the tents, and sing some hymns appropriate to the parting of those who have been worshippers together in the tented grove for the week or more of the meeting's continuance.

Ordinarily the colored people form in marching order, and defile into line immediately after the whites; but in some localities, last offence should be taken by outsiders, the colored people are marched around by themselves, and after the procession of the whites has taken place. To conciliate the Pro-Slavery sentiment in the locality the latter plan was adopted by the prudent dignitary who had charge of the interests of the meeting.

Rev. WM. MCCOMBS, the Presiding Elder, placed himself at the head of the procession of the colored members of the Methodist Episcopal Church, which was made up of slaves and free people of color; when a mob of more than 50 persons, led on by an ex-dignitary of the county, entered the circle and came up immediately abreast the procession.

The leader of the mob forbade Mr. MCCOMBS to take another step at his peril, and threatening him with the vengeance of the mob should he dare to advance.

The Presiding Elder, intimidated by threats of personal violence, and fearing bloodshed and a general melee, quit his place at the head of the procession, and the mob was triumphant on the ground made sacred by the laws of Maryland as is the inside of a Church.

A magistrate on the ground, and an officiating member of the Methodist Episcopal Church, was applied to, we learn, for a writ, to arrest the leader of the mob. This process was denied the Presiding Elder; and he found to his chagrin, and in contradiction of the former repeated assevarations in regard to Methodism in the Slaveholding Territories of the Philadelphia Annual Conference, that the Methodist people were untrue to Anti Slavery Methodism, or at least had not the courage to support their Church official when the interest and rights of the colored people were in question.

We are not lovers of strife and bloodshed, yet we can only think of the position of Mr. MCCOMBS as one representing, on this occasion, the whole interests of Anti-Slavery Methodism on the Peninsula, and deeply regret that right, and the *prestige* of a powerful Church on the right side, should so quietly have been surrendered. M.

The Toronto Riot.

From the Colonist, 22d.

The following are the names of the persons who were arrested for being engaged in the riot of Wednesday night: Thomas Kelley, Thomas Ferry, James Donney, Timothy O'Donnell, James Mitchell, William Hartrey, Hugh McGuire, John May, Michael Jones, Thomas Farnan, Thomas Jordan, James Flanigan, James Swanton, Isaac Matthews.

Yesterday they were arraigned at the bar of the Police Court, but the inquiry has been deferred until next Wednesday, Aug. 26.

They were allowed to find bail, each person in $300 with two securities of $100 each. They all got the requisite securities. There were ten carters and four cabmen.

THE FALMOUTH ARRIVED.—The United States sloop-of-war *Falmouth*, E. FARRAND, Commander, from Rio Janeiro, July 11, arrived below yesterday. *List of Officers*—Commander—E. W. FARRAND. Lieutenants—George W. Rodgers, W. W. Pollock, J. R. Franklin, W. B. McGunnigle. Master—F. M. Ramsay. Surgeon—J. J. Abertheny. Assistant-Surgeon—Wm. M. Page. Purser—G. W. Abbott. Passed Midshipmen—H. C. Campbell, W. A. Kirkland, W. S. Bradford. Captain's Clerk—Thos. H. Lee. Boatswain—E. B. Bell. Gunner—T. A. Cunningham. Carpenter—J. W. Stetson. Sailmaker—T. W. Rurth. Purser's Clerk—M. R. Moore.

INFLUENCE IN A HOUSE THIEF.—PETER RINGLEY, a young German who perambulates the City with a basket containing a few buttons and other small articles, under the pretence of being a peddler, was arrested by officer HAMBLIN, of the Third Precinct, charged with stealing coats, pants, vests and other articles of clothing, worth $50, from the boarding-house of Mrs. WILSON, No. 59 Murray street. When calling at the house, the prisoner forced himself up stairs against the wishes of the servant girl; soon after which he descended to the street with the stolen clothing on his arm. He was met by MATTHEW GAYLEY, one of the waiters, who caught and detained the prisoner till the arrival of officer HAMBLIN.

After the arrest RINGLEY told the officer: "I goes up stairs, sees the door open, nobody in the room, I sees the clothes hanging there and I takes a few." The prisoner was astonished when informed that the *goods stolen* by him were valued at $50. A German who keeps a small and suspicious looking shop at No. 58 West Broadway, is said to be in the practice of furnishing the prisoner with his small stock in trade, and sending him abroad to operate. RINGLEY, the accused, was taken before Justice OSBORNE and locked up for trial.

BUSINESS NOTICES.

GREAT FIRE IN NEW-ORLEANS.—EXTRACT from a letter from New-Orleans to T. T. TWITTY, Agent for Herring's Patent Champion Safe:

The day after you left us had quite a large fire here. One of the stores destroyed was occupied by Messrs. Elliott & Co. The Herring's Patent Safe which they bought was in the fire several hours, and when opened the books and papers were found to be in a perfect state of preservation. They are well satisfied with it and will want another when their store again. I have let them have our book office until their store is rebuilt, which will be about the 1st of September. Yours,

THOMAS TWITTY.

NEW-ORLEANS, Aug. [illegible]

E. G. HERRING & CO., manufacturers, Green Block, Nos. 128, 130 and 132 Water-st., and 251 Broadway, corner Murray-st., New-York.

WATSON'S SEWING MACHINES—ANOTHER REPORTED AGAINST THEM.—On the 24 day of August instant, the United States Circuit Court for the southern district of New-York, granted an injunction in a suit against [illegible] & Co., restraining them from making, using, selling, or advertising for sale any Sewing Machines [illegible] Watson's patent [illegible] A. T. STEWART & CO., No. 463 Broadway.

WM. J. CAMPBELL, Superintendent.

CENTRAL RAILROAD OF NEW-JERSEY.—Connecting at New-Hampton with the Delaware, Lackawanna and Western Railroad, and at Easton with the Lehigh Valley Railroad.
Summer Arrangement—Commencing May 18, 1857. Leave New-York for Easton and intermediate places from Pier No. 2, North River, at 7:30 A. M., 12 M., and 3:30 P. M.; for Somerville, by above trains and at 5:15 P. M. The above trains connect at Elizabeth with trains on the New-Jersey Railroad, which leave New-York from foot of Cortlandt-st. at 7:00 and 10 M., 3:30 and 5 P. M. Passengers for the Delaware, Lackawanna and Western Railroad, will leave at 7:30 A. M. only; for Lehigh Valley Railroad at 12 M. only.
JOHN O. STEARNS, Superintendent.

NEW-JERSEY RAILROAD—FOR PHILADELPHIA AND THE SOUTH AND WEST, via JERSEY CITY.—Mail and Express Line. Leave New-York at 8 and 11 A. M. and 4 and 6 P. M., 96; 12 M., 2:30; stopping at all way stations. Through tickets sold for Cincinnati and the West, and for Baltimore, Washington, Norfolk, &c., and through baggage checked to Washington in 5 A. M. and 6 P. M.
J. W. WOODRUFF, Assistant Superintendent.
No baggage will be received for any train, unless delivered and checked 15 minutes in advance of the time of leaving.

HUDSON RIVER RAILROAD.—FROM JULY 6, 1857, trains will leave Chambers-st. station as follows: Express trains, 6 A. M. and 2:15 P. M.; Albany passenger trains, 9 A. M., 12 M., and 3:30 P. M.; for Sing Sing, 10:15 A. M. and 4 P. M.; for Poughkeepsie, 7 A. M. and 1 and 7 P. M.; for Peekskill, 5:30 P. M. The Poughkeepsie, Peekskill and Sing Sing trains stop at the way stations. Passengers taken at Chambers, Canal, Christopher and 31st sts. Trains for New-York leave Troy at 8:35, 8:45, and 10:40 A. M., and 4:40 P. M.; and Albany at 6:35, 9, and 10:40 A. M., and 4:40 P. M.
A. F. SMITH, Superintendent.

FLUSHING RAILROAD—LEAVES FULTON Market Wharf, by steamer ISLAND CITY, at 6:45, 8 and 10 A. M., 1, 4 and 6 P. M. The cars leave Flushing, L. I., at the same hours, meeting and exchanging passengers with the boat at Hunter's Point—through in 50 minutes. Fare 25 cents.
WM. H. SMITH, Receiver.

STEAMBOATS.

DELIGHTFUL SAIL!
THE BEAUTIES OF NATURE AND ART TO BE SEEN AT A VERY LOW PRICE.
FOR FLUSHING AND COLLEGE POINT.
The beautiful and fast sailing steamer ENOCH DEAN, Captain WILLIAM H. REYNOLDS, will, on and after MONDAY, June 1, run daily (Sundays excepted) as follows:
Leave Flushing at 8 o'clock A. M., and 2 o'clock P. M.
Leave College Point at 6:10 A. M., and 2:15 o'clock P. M.
RETURNING—Leave New-York at 10:30 o'clock A. M., and 5 o'clock P. M.
At the low fare of FIFTEEN CENTS, or SIXTEEN TICKETS for TWO DOLLARS.
N. B.—As the steamboat channel in Flushing Bay has been dredged out by private enterprise, affording an abundant supply of water at all times of tide, Pic-Nic and other parties may now rely upon making the trips for the season with regularity and dispatch.
CALEB L. SMITH, Clerk.

PORTRAITS IN THE HIGHEST STYLE of art, in one minute. J. C. PLATT, No. 363 Broadway.

FOR EUROPE.

THE NEW-YORK AND LIVERPOOL UNITED STATES MAIL STEAMSHIPS.—The other steamships this line are:
The ATLANTIC, Capt. Oliver Bursting.
The BALTIC, Capt. Joseph Comstock.
The ADRIATIC, Capt. James Wing.
These ships having been built by contract expressly for Government service, every care has been taken in their construction, as also in their machinery, to insure strength and speed; and their accommodations for passengers are unequaled for elegance and comfort.
Price of passage from New-York to Liverpool, in first cabin, $150; in second do., $75. Exclusive use of extra size state rooms, $375. From Liverpool to New-York, 30 and 20 guineas. An experienced surgeon attached to each ship. No berths can be secured until paid for. The ships of this line have improved water-tight bulk-heads.

PROPOSED DATES OF SAILING.

FROM NEW-YORK.	FROM LIVERPOOL.
Saturday, June 20.....1857	Wednesday, June 24...1857
Saturday, July 4.....1857	Wednesday, July 8.....1857
Saturday, July 18.....1857	Wednesday, July 22....1857
Saturday, Aug. 1.....1857	Wednesday, Aug. 5.....1857
Saturday, Aug. 15.....1857	Wednesday, Aug. 19....1857
Saturday, Sept. 12.....1857	Wednesday, Sept. 2....1857
Saturday, Sept. 26.....1857	Wednesday, Sept. 23...1857
Saturday, Oct. 10.....1857	Wednesday, Oct. 14....1857
Saturday, Oct. 24.....1857	Wednesday, Oct. 28....1857
Saturday, Nov. 7.....1857	Wednesday, Nov. 11....1857
Saturday, Nov. 21.....1857	Wednesday, Nov. 25....1857
Saturday, Dec. 5.....1857	Wednesday, Dec. 9.....1857
	Wednesday, Dec. 24....1857

For freight or passage apply to
EDWARD K. COLLINS, No. 56 Wall-st., New-York.
BROWN, SHIPLEY & CO., Liverpool.
STEPHEN ALLEN & CO., No. 37 Austin Friars, London.
R. G. WAIN WRIGHT & CO., Paris.
The owners of these ships will not be accountable for gold, silver, bullion, specie, jewelry, precious stones, or metals, unless bills of lading are signed therefor, and the value thereof expressed therein.

FOR LIVERPOOL.—THE UNITED STATES Mail Steamship ADRIATIC, Joseph Comstock, commander, will depart with the United States mails for Europe positively on SATURDAY, Sept. 12, at 12 o'clock M., from her berth at the foot of Canal-st.
For freight or passage, having unequaled accommodations for elegance and comfort, apply to
EDWARD K. COLLINS, No. 56 Wall-st.
Passengers will please be on board at 11 o'clock A. M.
All letters must pass through the Post-Office; any others to be returned.
NOTICE.—The steamers of this line have water-tight compartments.
The BALTIC, Capt. J. J. COMSTOCK, will sail on the 26th of September.
No expense has been spared to make the ships of this line in all respects as good as new. The thorough examination given them proves their mode of construction yet unequaled.
N. B.—Hereafter the regular-built ships for this line will perform the entire service.

FOR BREMEN DIRECT.—PRICE OF PASSAGE: first cabin, $80; second, $60; steerage, $35.—The first-class paddle wheel steamship ERICSSON, A. H. LOWZAS, Commander, having been employed during the last fifteen months in the Collins United States Mail Line from New-York to Liverpool, where she has established her reputation as one of the safest and most comfortable of ocean steamers, will now be placed upon the route to Bremen. Her sailing days for the present season will be:

FROM NEW-YORK.	FROM BREMEN.
WEDNESDAY.....Sept 9	SATURDAY.....Oct. 17.
WEDNESDAY.....Nov. 14	SATURDAY.....Dec. 12.

This ship has water-tight compartments, which completely isolate the engines. Only a limited number of steerage passengers will be taken. For freight or passage, apply to G. H. SAND, No. 11 South William-st.; or to DUNHAM & CO., 13 William-st., corner Beaver-st.

FOR SOUTHAMPTON AND HAVRE.—THE United States Mail Steamer ARAGO, D. LENS, Commander, will leave for Havre, touching at Southampton to land the mails and passengers, on SATURDAY, Sept. 19, at 12 o'clock, from Pier No. 37, North River, foot of Beach-st.

PRICE OF PASSAGE.
First Cabin.....$150 | Second Cabin.....$75
This ship has five water-tight compartments including engines, and is fitted in the most of comfort or steerage, the water could not reach them, and the pumps being free to work, the safety of the vessel and passengers would be secured. Baggage not wanted during the voyage should be sent on board the day before sailing marked below. For freight or passage, apply to MORTIMER LIVINGSTON, Agent, No. 7 Broadway.
N. B.—The steamer FULTON will succeed the ARAGO, and sail Oct. 17.

THE BRITISH AND NORTH AMERICAN ROYAL MAIL STEAMSHIPS.

FROM NEW-YORK TO LIVERPOOL.
Chief Cabin Passage.....$120
Second Cabin Passage.....70

FROM BOSTON TO LIVERPOOL.
Chief Cabin Passage.....$110

STATIONERY HALL, No. 216 and 218 Pearl-st., N. Y.
J. A. H. HASBROUCK,
PRINTER, LITHOGRAPHER and STATIONER.
All kinds of PRINTING executed in the best style, WITH COPPER-FACED TYPE, AT THE LOWEST RATES.

MEDICAL.

A FALSE THEORY EXPLODED,
AND THE
SCIENCE REVEALED.
Mankind have long been engaged in darkness as regards the mysteries of medicine, and of deriving a truthful solution of its power over disease, and its proper use in the treatment of the sick.
Medicine, as practised by the regular faculty, is a fiction—a bundle of improbabilities and uncertainties. There is nothing in its theories on which the physician can rely as certain or fixed; the results obtained from its prescriptions are doubtful, and in most cases unsatisfactory.
It is a solemn and startling fact, that three-fourths of those who have deserted this life, died victims, not to disease, but to the injudicious application of this subtle and uncertain theory, as practiced by the regular faculty.
We have proved the utter falsity of the regular theories of medicine, and the great undeniable truthfulness of the R. R. R. over and over again; for in a thousand cases, where the regular physicians have given up their patients as incurable, and had to remove them from the house to only a few short hours, that their relatives said do live, Radway's Ready Relief, Regulators or Resolvent, as the case may have been, has restored these dying patients to new life and health.
In the treatment of the sick by the R. R. R. remedies, there is nothing left for chance or uncertainty, for these remedies are so prepared as to remove fever and pain in a speedy manner, founded on principles as immutable in their power over disease, as the laws of gravitation over the earth. It is, therefore, impossible for these remedies to fail in removing from the human system the difficulty for which they may be given, and of restoring the sick human system to its normal condition of health.
This is readily seen in the miraculous efficacy of Radway's Ready Relief—for for the moment this remedy is applied to the part or parts of the body racked with pain, or crippled with infirmities, all pain and uneasiness ceases, and the crippled, lame and wounded limb become invigorated with renewed strength. So also with the Resolvent. The most repulsive sores, ulcers, tumors, and the most obstinate of diseases, yield to its influence quickly, and a few doses is taken.
In cases of dyspepsia, constipation, the heavy disorganement of the liver, congestions, palpitation of the heart, Radway's Regulators—in the form of Pills, can be relied upon as a positive and certain corrector and regulator of these difficulties. In cases of temporary constipation, the derangement of the stomach or bowels, Radway's Ready Relief, or Regulating Pills, will quickly, if they remove the temporary difficulty, do so at the expense of cramps, sickness at stomach, and weakness, and, after the effects of these purgatives are over, the bowels are left costive and the system debilitated. Radway's Regulators will instantly relieve the pain and then and remove the difficulty, and restore a regular action to the liver, stomach, bowels and other organs—they neither irritate, inflame, sicken or weaken the patient, and the evacuations are natural, without prostrating the system or cramping the bowels.
These remedies are the only ones that have endured the hygienic probate to be safe, sure, and reliable in demonstration—invariable in all cases, and proceeding on a settled routine. They, and they alone, have imparted to the homogeneous experience and resonant practice of the so-called "regular faculty," the precision and invariability which are essential to the requirements of a science. Taking the human body as the problem, and health as the normal condition, they proceed by truth relies to eliminate all the causes of disease and pain, and thus restore the constitution to its integrity, by the expulsion of those local or organic irregularities which vitiate the soundness of the whole.

DANGEROUS DISEASES.
In Cholera, Yellow Fever, Ship Fever, Dysentery, Diarrhœa, Typhus and Typhoid Fever, and all malignant and malarious Fevers—Radway's Ready Relief and Regulators are not only positive curatives, but certain preventives.
Not only in the milder latitudes of the North have these Remedies cured the patients of these terrible maladies, but under the burning zones of the tropics, where in the wildest and most violent delirium, they scourged the people as a pestilence. With these Remedies you need not fear exposure to any contagious disease or infectious malady.

CONSTITUTIONAL DISEASES.
All diseases that have become established in the system, called chronic or constitutional, Radway's Resolvent, aided by the Relief and Regulators, will remove—as Scrofula, Syphilis, Bronchitis, Ulcers, Sores, Fever Sores, Humors, Salt Rheum, and all skin diseases will quickly yield to this all powerful remedy.
The use of the Resolvent will, in a few weeks, entirely change the whole condition of the body, we care not from how many generations you have derived your title to the diseases established in your blood. Radway's Resolvent will remove it, and give to you what your forefathers were unable to—a pure and healthy body—free from diseases.

COMMON DISEASES.
All diseases prevalent at this season of the year, caused by derangements of the organs of the system, sudden changes of the weather, heat and cold, disturbed circulation of the blood—Rheumatism, Neuralgia, The Dolorous, Bowel Complaints, Fever and Ague, Headache, Toothache, Ache and Pains of all kinds, Bruises, Burns, Scalds, Falls, Inflammations, Fevers, Congestive Diseases, Humors in the system—Impure Blood, Boils, Pustule Pimples, Blotches, &c. Liver Complaints—Dyspepsia, Kidney Complaints, and all diseases, whether acute, inflammatory, malarious, nervous, chronic or constitutional, RADWAY'S Remedies will most positively exterminate and restore the infirm and enfeebled system to health and strength.

AN OFFER—TO THE DYING.
To who have friends now upon the brink of the grave on whom all hopes of recovery are lost—who have been given up as incurable by your physician, we invite you to make one more effort to save the valued life of the dying one. A trial of these Remedies cannot do any injury, and may restore to life and health, even though no hopes are entertained by your physician. Over a thousand such instances have come to our knowledge; and we therefore feel ourselves justified in requesting the trial. Surely after the physician says he can do no more, his prejudices to your using a remedy that might do good, is criminal.
As one of the instances we have alluded to in the above article, we refer the public to the case reported to us by Richard Griffith, Esq., well known in Canada West, as a man of high integrity, and well approved of by his countrymen for his high official capacities.
HARROWSMITH, Fontenac Co., C. W., June 24, 1857.
In October, 1856, his wife gave birth to a child, but her bed too early, and caught a severe cold, which promised to terminate her life. The best physicians in this neighborhood and Kingston were in attendance on her—but all of no avail—*the Doctors had given her up to die. For seven consecutive weeks* I sat at her bedside momentarily watching to see her breathe her last. I happened to see a copy of your paper, called "*The Moving World*," and there read of your medicines. I resolved to test them as a last resort. I gave the *Resolvent* with the Regulators—and Relief—according to directions, *and in three days*

OBSERVED A WONDERFUL IMPROVEMENT.

From this she then slept—recovered, and is now, thank God, better than ever she was in her life.
The child, when three months old, caught a bad cold, and *dwindled away to a mere skeleton*, nothing but *bone* and skin; his eyes *protruded from* his head, as if *they would drop out*; the physicians all united in saying there was no use of attempting to save him; *his case was hopeless, as it was too young, and must die.* But I thought different. Your Remedies gave life to my wife, while the doctors gave her up to death. I again had recourse to them. I gave him the Resolvent internally, and used it as a wash externally, to his eyes. He is now a laughing, hearty, prattling child, enjoying the best of health. Your most obedient and grateful servant,
RICHARD GRIFFITH.
The above, reader, is but one of the thousands of similar cases in the world, where, had the remedies of the physicians been relied upon, without further trial, death would have seized its victim. Do not, therefore, give up your friends on the mere report of your physicians, who say they can do no more. When you are told this, resort to our Remedies.
RADWAY & CO., No. 162 Fulton-st.

NEW AND IMPORTANT DISCOVERY IN THE SCIENCE OF MEDICINE.—TRISEMAR.—None are genuine unless the engravings of the Seals of the Patent Office of England, the Seals of the Ecole de Pharmacie de Paris and the Imperial Colleges of Vienna, are fixed upon each wrapper and each bottle.
Sold by Dr. H. A. BAREOW—Member of the Imperial College of Vienna and Royal College of Surgeons, London, who may be personally consulted at his residence, No. 197 Prince-st., (few blocks west of Broadway,) New-York, from 11 o'clock in the morning till 2, and from 4 o'clock till 8 in the evening. (Sundays excepted.)
TRISEMAR No. 1—Is the remedy of general and local debility, loss of virile power, premature decay, and all the distressing consequences arising from early abuse, &c.; all physical impediments vanish like magic before its influence, thus rendering its use invaluable to those entering the marriage state.
TRISEMAR No. 2—Entirely eradicates all traces of those disorders which copaiva and cubebs have so long been thought an antidote for, to the ruin of the health of a vast portion of the population.
TRISEMAR No. 3—Is the great European remedy for that class of disorders which, unfortunately, the English physician treats with mercury, to the inevitable destruction of the patient's constitution; and which all the Sarsaparilla in the world cannot remove.
TRISEMAR Nos. 1, 2 and 3 are prepared in the form of a lozenge, devoid of taste or smell, and can be carried in the waistcoat pocket. *Sold in the cases and divided in separate doses, as administered* by Velpeau, Lallemand, Roux, Ricord, &c., &c. Price $2 each, or four cases in one for $6, which saves $2; and in $27 cases, whereby there is a saving of $6.
Special arrangements having been made with the various Expresses, the nine-dollar cases of the Triesemar and the larger sizes will be forwarded by Dr. Barrow, carriage paid, immediately on receiving a remittance, to any part of the world, securely packed and addressed according to the instructions of the writer, thus securing to the public genuine European preparations, and effectually preventing them from spurious and pernicious imitations. The three-dollar cases sent as usual, but not free of carriage.
NB—No. 197 Prince-st., (few blocks west of Broadway,) New-York.

DR. RALPH'S OFFICES FOR THE TREATment of all diseases and abuses of the sexual and urinary system, existing debility, gleet, stricture, and seminal weakness, piles, gravel, dyspepsia, and all chronic and constitutional diseases. MEDICAL.

EVERY WOMAN'S BOOK!
THE MARRIED WOMAN'S
PRIVATE MEDICAL COMPANION.
BY DR. A. M. MAURICEAU,
Professor of Diseases of Women.
One Hundredth Edition. (300,000.) Price, by mail, [illegible]
[On fine paper, extra binding, $1.]
Every woman can have discovered, by comparing her own symptoms with those described, the nature, character, and cause of her complaint, and be spared much unknown and suffering. The wife about becoming a mother has often need of instruction and advice in respect to her situation, which she will here find. This book tell her what is the matter, and tells her what to do for it, in simple but chaste words, and such as she can understand.
Those suffering from obstructions or irregularities peculiar to the female system, or from *prolapsus uteri*, (falling of the womb,) or from *fluor albus*, will each find in its pages the means of prevention, amelioration, and relief.
[Extract of a letter from a gentleman in Dayton, Ohio.]
DAYTON, May 1, 1857.
DR. A. M. MAURICEAU—*My Dear Sir:* My wife has been successfully making for some three years or more, in consequence of great anguish and suffering some months before and during confinement; every successive one more and more debilitated and prostrated, has visited her life in imminent danger, and which was on the last occasion despaired of. I supposed that this state of things was inevitable, and resigned myself to meet the worst. I heard your book highly spoken of, as containing some matters touching my case. On its receipt and perusal, I cannot express to you the relief it afforded my distressed mind, and the joy its pages imparted to my wife, on learning that the great discovery of M. Mauriceau was provided a remedy. It proved a precursor to one which I have cause to be grateful. For this, one another year would have passed over my head, to all human probability, my wife would have been in her grave and my children left motherless.
For sale by STRINGER & TOWNSEND, No. 392 Broadway; BREEMAN & CO., Astor House, N. Y.; DEWITT & DAVENPORT, Tribune Building; and at the publication office, No. 129 Liberty-st., New-York; JOSEPH TUCKER, Mobile; also T. W. PETERSON, Philadelphia.
Sent free of all "THE MARRIED WOMAN'S PRIVATE MEDICAL COMPANION" on receipt of $1, to any part of the United States, Canada and British Provinces. All letters must be post-paid, and addressed to Dr. A. M. MAURICEAU, Box No. 1,324 New-York City. Publishing Office, No. 129 Liberty-st., New-York.

SANDS' SARSAPARILLA.
In this preparation we have all the restorative properties of the root combined and concentrated in all their strength and efficacy; accordingly we find it resorted to in cases of scrofula, liver complaint, salt rheum, dyspepsia and general debility, with unprecedented success, as it rectifies the blood, restores to the stomach its tone, and imbues with healthful impulses the entire organization. Prepared and sold by A. B. & D. SANDS, Druggists

LAW INTELLIGENCE.

MR. [illegible]

Attachment against Lawlor's Property—Order of Arrest against Lawlor in a Civil Suit.

SUPREME COURT—SPECIAL TERM.—AUG. 26.

Before Judge Peabody.

John P. Treadwell, Virgil Whitcomb & Charles Lamb vs. John M. Lawlor.—A civil suit has been commenced against John Lawlor, who was charged with embezzling his employers' funds, while acting in the capacity of book-keeper for them at the St. Nicholas Hotel. Upon the application of Mr. Harrington, counsel for the plaintiffs, Judge PEABODY granted an order of arrest against the defendant. An attachment was also granted against his property. The following affidavit of Mr. Treadwell was read in support of the motion for attachment:

MR. TREADWELL'S AFFIDAVIT.

City and County of New-York, ss.—John P. Treadwell, of the said City and County, being duly sworn, doth depose and say that this deponent, Virgil Whitcomb and Chester Lamb are and since the 14th day of March, in the year 1857, have been copartners in the keeping of the hotel called the St. Nicholas Hotel, in the City and County of New-York, under the name, style and firm of Treadwell, Whitcomb & Co.; that as such proprietors and copartners the said plaintiffs have had in their employment as a clerk, agent or book-keeper the above-named defendant, John M. Lawlor; that said defendant during the whole period of said copartnership has been such clerk, agent or book-keeper; that during the time said defendant, John M. Lawlor, has been so acting as such clerk, agent or book-keeper, he has stolen, secreted or embezzled from these plaintiffs money to the amount of $5,000 and upwards; that the said Lawlor, in a conversation with this deponent on the evening of the 21st day of August last, the said defendant, John M. Lawlor admitted to this deponent that he had, during the time of said copartnership, stolen, secreted and embezzled a large amount of money from this deponent and the said copartners, and offered to repay and pence to this deponent of this deponent and his said copartners, property, both real estate and personal property to an amount in value, as he then said, of over $5,000, as an indemnity to this plaintiff and his copartners; that at the time of said offer by said John M. Lawlor so made to this deponent, this deponent did then and there inform said Lawlor that he had, in the belief of this deponent, taken and stolen from this deponent and his said copartners money to an amount of over $10,000, to which said last named declaration of this deponent said Lawlor made no reply, except that he did then and there reply that if all he had so stolen and embezzled he would then return to this deponent in the property aforesaid all that then remained, and that the remainder of what he had taken he had spent in such a manner as he could not collect or account for; that said Lawlor did then and there state to this deponent that he had in the hands of his mother in the city of Albany, as a part of the avails of said means so embezzled, a note of $800, a due bill in the sum of $500, money to the amount of $600, another due bill in the sum of $200 and cash upon his person of $200. This deponent further says that on the evening of the 21st day of August, next following the evening before stated, in another conversation which this deponent had with the said John M. Lawlor, the said Lawlor informed this deponent that of the aforesaid sum of $800 which he had before informed this deponent was in his mother's house the said sum of $600 had been deposited in a Savings Bank in the City of Albany, in the name of a little sister of said Lawlor, then twelve or fourteen years of age; that said Lawlor then stated to this deponent that the object which he had in thus placing said moneys in his mother's hands was to prevent the same being around the person of the said Lawlor, and to prevent the same exciting suspicion against him, and to prevent the same from being taken from him, and to conceal the same. This deponent further says, that at the time of both of said conversations of this deponent with said Lawlor, said Lawlor informed this deponent that the said note of $800 was for money that he had sent to his mother, which he had so taken from this deponent and his said copartners, and his mother, at his request, had invested the same with some friend of this said Lawlor, and had taken the said note in security therefor, for the purpose of concealing the same as aforesaid, and that he had so placed all of said money in his mother's hands, in order to prevent the same from being obtained by this deponent and his said copartners. JOHN P. TREADWELL.

Sworn before me this 25th day of August, 1857. WM. LEE, Com. of Deeds.

SUPREME COURT—SPECIAL TERM.—Aug. 26.

Before Hon. Judge Peabody.

APPLICATION FOR THE ARREST OF MR. THOMPSON DENIED.

Charles A. Holdship and Henry Holdship vs. John Thompson.—This was an application for an order of arrest against John Thompson, the bill broker. It is alleged that he is indebted to the plaintiffs for the amount of $7,000. The following is the affidavit and complaint upon which the application was based:

THE COMPLAINT.

City and County of New-York, ss.—Charles A. Holdship and Henry Holdship, the plaintiffs in the above entitled action, by John H. Anthon, their attorney, complain of John Thompson, defendant therein, and show to the Court as follows, namely:

That at all the times hereinafter mentioned the said plaintiffs were, and they still are, partners in business, under the firm, name and style of "Holdship & Co.," and the defendant was and is a broker or banker, doing business in the City and county aforesaid. That at divers times and on divers days, at the City of New-York aforesaid, the said defendant received for the plaintiffs, as their broker and confidential agent in that behalf, divers sums of money, the property of the said plaintiffs, amounting in the aggregate to the sum of $7,000 or thereabouts, to be by him, the said defendant, paid to the said plaintiffs, or their order, whenever so requested to do.

The plaintiffs further show, that though requested, the said defendant has not paid the said sums of money or any part thereof, but has converted the same to his own use and utterly refuses to pay the same.

These plaintiffs further show, that by reason of the premises the defendant is justly indebted to them in the said sum of $7,000, together with their costs and expenses. J. H. ANTHON, Plaintiff's Attorney.

The usual jurat is sworn to before Wm. H. Duesenbury, Commissioner of Deeds, on the 26th of August, by Charles A. Holdship.

MR. HOLDSHIP'S AFFIDAVIT.

City and County of New-York, ss.—Charles A. Holdship, one of the above-named plaintiffs, being duly sworn, says that the said plaintiffs are partners in business, under the firm and name of "Holdship & Company," and that the defendant is a banker or broker doing business in the City aforesaid.

That at divers times prior to the 26th day of August, 1857, the said defendant, as the banker and confidential money agent of the plaintiffs, received at the said City of New-York, for the plaintiffs, divers sums of money, amounting in the aggregate to the sum of $7,000, or thereabouts.

That said sums of money were the property of the plaintiffs, and were received for them by the said defendant in a fiduciary capacity and upon the implied or express terms that he, the said defendant, as the agent and banker of the plaintiffs, would pay the same to them or to their order whenever so required to do.

That having obtained the said sums of money as such banker, and in the fiduciary capacity aforesaid, the said defendant wholly refuses to pay or deliver the same to these plaintiffs, or to their order, though requested so to do; but, on the contrary thereof, he converted the same to his own use, and refuses to pay the same, or any part thereof, except that he has paid one check or draft of the plaintiffs to the amount of $2,000.

This deponent further says that the said defendant is indebted to the said plaintiffs in the sum of $7,000 or thereabouts, as aforesaid, and that the said defendant has no claim or demand against the plaintiff whatever, to his knowledge, but holds and retains the said several sums of money, the property of the plaintiffs, received as their confidential business and banking agent as aforesaid, without claim of right. CHAS. A. HOLDSHIP.

Sworn before me this 25th day of August, 1857. W. H. DUESENBURY, Commissioner of Deeds.

THE ORDER TO SHOW CAUSE.

On the foregoing affidavit, and on motion of J. H. Anthon, attorney for the plaintiffs herein, let the defendant or his attorney show cause why an order of arrest should not be made in this action, holding the said defendant to bail in the sum of $7,000 before one of the Judges of this Court, at their Chambers, in the City Hall, in the City of New-York, on the 1st day of September, prox., at 10 o'clock A. M. C. A. PEABODY.

The Judge denied the application on the grounds that it appeared from the papers and a knowledge of the system of banking business in present use, that such deposits was made in the belief that the depositor is at liberty to use them with, and as, his own funds; and the depositor trusts entirely to the responsibility of the depository. This was a case in which the defendant had simply failed to make good his engagements—not one in which he had improperly used or withheld the funds of the applicant while acting as his agent.

Mr. Anthon, counsel for the plaintiff, subsequently obtained from Judge Peabody an order to show cause why the order of arrest should not be granted.

The Arrest of John Thompson, the Broker.

SUPERIOR COURT—SPECIAL TERM.

Before Judge Hoffman.

The Metropolitan Bank vs. John Thompson.—Yesterday afternoon a replevin suit was commenced in the Superior Court, at the suit of the Metropolitan Bank, to recover the delivery, if possible, of property to the amount, which had been seized by the sheriff of the Metropolitan, the well known banker of Wall-street, who suspended payment on Tuesday. The sheriff proceeded to execute the writ, and served the papers on Mr. Thompson, but could not obtain the money.

The following is an order of arrest upon the claim and demand of the Metropolitan Bank, was issued by Judge Hoffman, against Mr. Thompson, holding the defendant to bail in the sum of $50,000.

Yesterday morning Mr. Thompson was arrested by Deputy Sheriff Stokes, and (time) is in custody, not being able to obtain the requisite bail.

The affidavit on which the order of arrest was granted set forth the above facts.

Before Judge Ingraham.

The counsel for the defendant applied to Judge Ingraham for a stay of proceedings in the above matter, and an order to show cause why the order of arrest should not be set aside and vacated. The Judge granted the application, making the matter returnable on Thursday morning at 10 A. M.

Mr. Thompson was still in the custody of Deputy Sheriff Byrne last evening at 6 o'clock.

The Ohio Life and Trust Company—Another Attachment Granted.

SUPREME COURT—SPECIAL TERM—AUG. 26.

Before Judge Peabody.

In the matter of the Ohio Life and Trust Co.—This morning another attachment was granted against the Ohio Life and Trust Company. It was granted in behalf of the Norwalk Bank, branch of the State Bank of Ohio. The indebtedness of the Trust Company to this Bank is said to be $60,000.

SUPERIOR COURT—SPECIAL TERM.

Before Judge Hoffman.

Erhard Bleiler vs. Benj. Van Raden.—The defendant, as owner in fee, leased the premises, Nos. 55 and 57 Forsyth-street, to the plaintiff's wife. The rent being unpaid, proceedings to dispossess have been taken before a Justice. The defendant admits that the lease was intended to be for the use and benefit of the plaintiff. There were long accounts between the parties, and claims, some admitted, some disputed.

It is a question whether the defendant, after having made the plaintiff's wife his lessee, can go against him and get possession.

Held, That the decisions of the Superior Court warrant an interference upon proper terms, and that a case within the rule is here made; but that the course of the Court in Forrested and Wilson, 1 Duer, 694, should be followed.

The order therefore is that the injunction, prohibiting the defendant from dispossessing the plaintiff, continue, upon the plaintiff paying into the Life and Trust Company, the sum of $300, supposed to be the balance of the rent due on the 25th of July last, without prejudice to that question, and with a provision that on the rent being thus paid, if application may be made for its payment, or that the injunction be dissolved.

Hernia, Piles, Fistula, Varicocele, and concealed Abscess of the lower bowel, cured without the knife or ligature. EDWARD H. DIXON, Editor of the Medical, has established a spacious private Hospital for the treatment of the most important Surgical cases. Most of the above, however, require no confinement. The cure is invariably warranted if the case is undertaken by Dr. DIXON, as the indications of cure or failure are apparent on examination. Dr. D. refers to D. C. McCALLUM, late Actuary of the Erie Railroad; DAVID S. BRADFORD, Cashier of the Bowery Bank; HENRY FORD, Brooklyn; MAURICE BARNETT, New-Orleans, and a great number of gentlemen on whom he has operated, from every part of the Union. Office hours from 7 to 8 and 7 to 9 evenings, at Dr. D.'s residence, No. 43 Fifth-avenue. At all other hours he is at his Hospital.

WEDNESDAY, Aug. 26—P. M.

The suspension of Mr. JACOB LITTLE and three younger members of the Stock Board was made known at the early session of the Brokers to-day, and as this additional trouble further complicated the position of outstanding contracts and rendered the deliveries of the day uncertain, there was a general rush to sell on the first call of the list. The lowest prices yet known through the present season were for one hour or so quite current. The sales at the Board of New-York Central, Erie, Pittsburg, Reading and Toledo, alone were over 19,000 shares. These five, noted: New-York Central as low as 71, 71⅛ ⅜ cent. Erie as low as 30, Reading as low as 59, Toledo as low as 39, and Pittsburg at 37 ⅜ cent. Some of the other Stocks were done even lower in proportion. Illinois Central at par, Rock Island 81, Michigan Central 71⅛, Michigan Southern 30⅛, Fort Wayne 46, La Crosse 30⅛, and Galena 81. These figures, however, were the minimum point reached in the morning, and were quickly succeeded by a speedy general advance, as will be noticed by the sales and bids at the Afternoon Board. Central went to 74 ⅜ cent, Reading to 62, Erie to 33⅛, Toledo to 41, Illinois Central, 102, and Pittsburg 77⅞. In Milwaukee Shares the transactions were fine on both Boards. The General Market for the afternoon Board, though quiet, was rather generally maintained on the figures. The failures of New-York Central were made with considerable difficulty to-day, and demanding the emphatic evidence in the forenoon to sell the Stock.

It is satisfactory to state that, outside the Stock Exchange, no additional failures were positively ascertained to-day. In the absence of facts of this nature, rumors were, as on yesterday, freely resorted to. The names of several private banking firms were bandied about, and one of the Bank Note Reporters (not THOMPSON'S) invited, by placard or extras, a run upon several of the smaller City Banks. No damage has resulted from all this, up to the hour of writing, though a malicious mischief, in at least one instance, was evidently intended. In regard to the small Banks of the City, we have to remark that the Clearing House will probably keep them to the straight line of duty, or, in default, throw them out of the Association. The larger institutions all appear to be pretty confident of their position, though some of their offices are nervous to a degree in certifying the checks of their dealers, and in one or two instances within our knowledge have behaved insultingly to highly responsible parties in adjusting their demand loans. The Discounts of the week are made with extreme caution, and outside of Bank the rates are unsettled and money difficult to be come at except on prime names. These go at 10@12 ⅜ cent. Exchange continues flat, and bills on London rate from 109 to 109¼ ⅜ cent. Altogether the day has been an unpleasant one in all money negotiations, and in making up bank accounts. One of the consequences of which is, that larger balances than usual were left over by the private bankers and also by the brokers. As confidence returns it will probably be found that several heavy and constant Street borrowers have been removed by the failures of the week, and should the export demand for gold for next Wednesday's steamer prove moderate, a good degree of ease will be restored to the market. The next Bank average of Specie will be a poor one, as it is now certain the California receipts will not be in until toward the close. The Sub-Treasury received to-day $389,214; paid out $284,128, raising the balance to $12,942,981.

The attaching creditors of the Ohio Trust are understood to have consented to the appointment of a General Receiver for the New-York office. Mr. LANE and Mr. FOSTER, Solicitors, are named for this duty. Private dispatches to-day from the West reflect a quieter state of things from the disaster than was apprehended. Arrangements are already made, by telegraph, for removing a number of the Ohio bank accounts to Messrs. WINSLOW, LANIER & Co., and Messrs. ATWOOD & CO. The involvements of the Trust agency here are said to be about $1,400,000 on deposit accounts, and about $2,000,000 or $2,500,000 on local loans and over-drafts. Against these are advances to the principal office at Cincinnati, advances on Ohio State Stock, advances to some of the Railway Companies on their bonds, and suspended individual loans and debts of various character. An inventory is now being prepared for the Receiver.

The Warren County Bank, of Pennsylvania, has suspended payment. The notes of the Rhode Island Central, Tiverton, and Farmers' Bank, of Wickford, Rhode Island; the Hancock Bank, of Maine; Warren Bank, Pennsylvania; Wooster Bank, Conn.; and Bank of Kanawha, Va., are thrown out, there being no present arrangement for their redemption here. The suspension of Mr. THOMPSON, yesterday, has involved him in a legal difficulty with the Metropolitan Bank, the particulars of which are given in our Court reports. The amount at issue is $12,500.

The public are cautioned against negotiating certificate No. 4,895 for ten shares of the Cleveland, Columbus and Cincinnatti Railroad, in the name of J. HOWARD KING, the same having been lost.

The Boston *Post* thus refers to the Money market in that city:

There is not much change in money. Some of the brokers report a slightly increased demand, but there is no advance in rates. As heretofore noted, nothing is done below 9 ⅜ cent., and the number of names taken below 10 is inconsiderable. Money is worth nearer 12 ⅜ cent. than anything else, for the average of fair paper in the street, or for call loans with "fancy" collaterals, of more or less repute. Of course many transactions are made at higher rates, both on time and on demand. The banks are pursuing their even tenor, and with nearly $3,500,000 of coin, they are able to keep a deal of strong paper from the street. Their exact holding Aug. 20, was $2,437,900; Aug. 21, $2,479,300; Aug. 22, $2,472,900, as reported to the Clearing-House. The failure of E. G. BAYES & Co. has had some outward effect upon the paper market. New-York funds are in good supply, but for some days there has been no movement of specie hitherward.

A rumor obtained through one of the papers yesterday, that the United States Trust Company, in order, we suppose, to take care of their own virtue, in these troublous times, had resolved to throw out all Railway collaterals. We believe that no such prescription is going on in that establishment, though it may be in some of the Banks where Directors probably feel themselves in want of all the spare cash that is going to sustain their own speculations, without assisting even the most worthy of the Railways, or lending on their stocks or bonds, in this crisis.

As a contradiction of a report industriously circulated through the City, we are authorised to state that the Metropolitan Bank has never discredited any genuine New-York or New-England Bank Bills. The Metropolitan Bank never received, and, of course, never discredited the bills of any of the following banks: Tiverton Bank, R. I.; Rhode Island Central Bank; Farmer's Bank, of Wickford, R. I.; Wooster Bank, Danbury, Conn.; Merchant's Exchange Bank, Bridgeport, Conn.; and Mount Vernon Bank, R. I.

The Panic in Wall-street.

From the Commercial Advertiser.

There have been no new developments this morning relative to the affairs of the Ohio Life and Trust Company. One or two more attachments than those mentioned yesterday have been sued out, but not to any great amount. It is useless to deny that the failure has caused a very gloomy feeling in mercantile circles, and that thus far we cannot see much alleviation of it. We trust, however, that the community will not be long in recovering from the present depression, and once more be able to look upon the brighter side of the picture.

We do not think that there is any good reason for the alarm expressed in some quarters. The failure of the Company will cause serious inconvenience to those whose funds are locked up by its suspension, without doubt, but all or nearly all its creditors here are simply secured from ultimate loss by the collaterals in their possession. But even were this not so, were every cent to be swept away, the failure standing by itself, would be of only minor importance. It is only in the shock that public confidence receives in crises like these that the elements of danger are involved.

And why there should be any want of that confidence at the present time, in this community, we are at a loss to know. We have still the great elements of prosperity amongst us. Accounts from all sections of the Union concur in the statement that the growing crops of all the great staples of the country never bore an aspect of brighter promise; and it will not be long before we will begin to realize something from their sale. All the other interests of the country aside from the railroad interest, are in a prosperous condition, and the aggregate wealth of the country was never greater than at present, throughout the whole length and breadth of the United States.

As a natural consequence of the present season of pressure the bank will have to limit their accommodations as much as possible. This is simply a matter of prudence, and will have to be borne with for a time at least. But if the community generally will only preserve their coolness, and endeavor to aid in the work of restoration, the trouble will be over, and we do not believe the inconvenience will be of very long continuance.

The Ohio Life and Trust Company—Report of the Failure to Continue.

[From the Cincinnati Gazette, Aug. 26.]

About 3 o'clock yesterday afternoon private dispatches were received in this city announcing the suspension of the New-York Branch of the Ohio Life and Trust Company, which, of course, was followed by a panic in Wall-st. The Ohio Company's officers report, on account, only the Trust Company, which, it is stated, has been unfortunate in its agency, in consequence of the failure of Mr. Little, and other causes, which, we do not pretend to understand, have had a bad effect. On the Fourth of July a small annual cash dividend was declared of four per cent, which, we understand, was paid in full. On Thursday last the stock sold in the New-York Board at 43, and in Boston at 44. In addition to all this the capital stock of the Bank proper is not impaired, while it is doubtless true that its assets are not less increased, while its debts are not diminished. Its general business of discount is in a good condition, promising, both prudence and management, a good business. Money is all in the West, as we have stated, and, indeed, every matter outside of New-York Stock circles here looks quite easy. What then would have caused a concurrence of disastrous in the operations of the institution? Upon this point we say nothing in the dark.

Through points of private channels we have no news from New-York except the bare announcement of the suspension. The doors were closed yesterday about 4 o'clock, and the fact was officially announced to the Directors here, by dispatch from Mr. STORER, President of the Bank, who left this city on Saturday morning, in obedience to an urgent dispatch from New-York, and reached the latter city on Sunday evening or yesterday morning. This is all that positively known. But we may, we think, safely venture the opinion that the difficulty has not resulted from any legitimate business transactions here or in New-York. Suspicions are numerous as to the true cause, and we have our fears that parties who controlled the Bank in New-York have been tempted to engage in stock speculations, on their own account, or to loan money on stock securities, thus diverting the means of the institution from their legitimate channel, and finding their operations proved worse daily, instead of improving, finally yielded to the pressure and confessed their error or crime. That this calamity has resulted from mismanagement, or what is worse, a breach of faith, of which the Directors here know nothing, can hardly be doubted.

The consolation to be drawn from this theory is, that the cause of this disaster is not such that it will be likely to affect correctly sound banking institutions. If it were brought about by commercial disasters, by which mercantile credit is generally impaired, we might fear that the evil would be widespread. But in the present state of affairs this is not to be apprehended. The Western country, fortunately, was never in a better condition than at the present time. The land is overrunning with agricultural wealth. Merchants cannot fear, with ample resources to meet their liabilities. Credits have been largely curtailed within the last twelve months. Banks have kept close to shore, and have but little to fear. Expenditure, which is always dangerous, has been avoided, and the aggregate circulation of Western Banks is at this time greatly below an average. These facts will tend to sustain confidence, under the pressure which an occurrence like that we are noticing is calculated to produce. It will be proper, therefore, in considering this disaster, to trace it to the true cause, and not connect it with the general legitimate business operations of the country.

The Board of Directors of the Trust Co. held a meeting last evening, and at a late hour we received the following card, from which it will be seen the Bank will not be opened this morning. The Directors express the belief that the means of the Company are ample to meet all its engagements; and assure the public that early steps will be taken to resume business. We understand that private dispatches were received from New-York last evening, expressing the belief that the New-York office would resume to-day. We hope such developments may be made as will justify an immediate resumption both here and at New-York. We shall doubtless receive advices to-day that will throw light upon this matter. In the meantime, our advice to all is to view the matter philosophically, and especially to keep cool. It is a great calamity, not so great that it might not be come, if people will not dispassionately guarding against excitement, and using all proper means to protect the credit of our institutions against the prejudices likely to grow out of this suspension.

THE OHIO LIFE INSURANCE AND TRUST COMPANY.

Having very unexpectedly received advices from New-York that the office of this Company in that City had suspended this day, the Board of Trustees deem it expedient to close its doors and suspend payment until they can be fully advised of the true situation and condition of their office. The Board of Trustees also deem it proper to say to the public, that they regard the means of the Company ample to meet all its engagements, and that early steps will be taken to resume business. By order of the Board.

Aug. 26, 1857. S. P. BISHOP, Asst. Cash.

P. S.—The collective paper will be found at the Bank of Commerce & Co., and the discounted paper in the room of the Trust Department of this Company. S. P. B., Asst. Cash.

FOREIGN COMMERCIAL INTELLIGENCE.

Liverpool Cotton Market.

The Broker's Circular reports the sales of the week at 39,000 bales, including 3,100 to speculators, and 2,000 to exporters.
